Green Scenarios: Mining Industry Responses to Environmental Challenges of the Anthropocene Epoch Artur Dyczko, Andrzej Jagodziński, Gabriela Woźniak,2022-05-24 This book aims to present an alternative based on natural processes and an environmental approach to post excavation site management e g post coal mining heaps These sites are places where various mineral excavation by products are collected Nevertheless some post mineral excavation sites are oligotrophic terrestrial wetland and water habitat islands providing unique biodiversity enrichment in the landscape These oligotrophic mineral habitats are essential in over fertilized eutrophic agricultural and urban industry surroundings Some post mineral excavation sites are places where the wildlife can develop and support the functional processes of novel ecosystems Implementing the newest biogeochemical and comprehensive knowledge into urban industry landscape

management will help to establish the ecosystem's processes and environmental functioning. There are several post industrial sites in Europe where the wildlife areas developed due to natural processes are becoming wildlife hotspots in densely populated urban industry areas. In this respect many of the oligotrophic mineral terrestrial wetland and water habitats of anthropogenic origin should not be categorized as environmentally dangerous and undergo economic utility focused reclamation. Facing the actual environmental constraints of the Anthropocene Epoch the book's chapters presenting the natural basics and prerequisites of the environmental ecosystem mosaics will be interesting for a broad range of environmentalists, scientists and students, miners, economists and sociologists.
