Web Mining Applications In E Commerce And E Services Studies In Computational Intelligence:

Web Mining Applications in E-Commerce and E-Services I-Hsien Ting, Hui-Ju Wu, 2009-01-24 Web mining has become a popular area of research integrating the different research areas of data mining and the World Wide Web According to the taxonomy of Web mining there are three sub fields of Web mining research Web usage mining Web content mining and Web structure mining These three research fields cover most content and activities on the Web With the rapid growth of the World Wide Web Web mining has become a hot topic and is now part of the mainstream of Web search such as Web information systems and Web intelligence Among all of the possible applications in Web research e commerce and e services have been identified as important domains for Web mining techniques Web mining techniques also play an important role in e commerce and e services proving to be useful tools for understanding how e commerce and e service Web sites and services are used enabling the provision of better services for customers and users Thus this book will focus upon Web mining applications in e commerce and e services Some chapters in this book are extended from the papers that presented in WMEE 2008 the 2nd International Workshop for E commerce and E services In addition we also sent invitations to researchers that are famous in this research area to contribute for this book The chapters of this book are introduced as follows In chapter 1 Peter I E-Service Intelligence Jie Lu, Da Ruan, Guangquan Zhang, 2007-03-09 Business organizations and governments are nowadays developing and providing internet based electronic services e services featuring various intelligent functions This book offers a thorough introduction and systematic overview of the new field e service intelligence It covers the state of the art of e service intelligence including both theorems and applications and a broad range of topics are discussed

Computational Intelligence in Integrated Airline Scheduling Tobias Grosche, 2009-02-26 In this text two planning approaches for integrated airline scheduling are presented One follows the traditional sequential approach and the other uses metaheuristics to offer a truly simultaneous approach to airline scheduling Geocomputation and Urban Planning Beniamino Murgante, Giuseppe Borruso, Alessandra Lapucci, 2008-12-25 Sixteen years ago Franklin estimated that about 80% of data contain geo referenced information To date the availability of geographic data and information is growing together with the capacity of users to operate with IT tools and instruments Spatial data infrastructures are growing and allow a wide number of users to rely on them This growth has not been fully coupled to an increase of knowledge to support spatial decisions Spatial analytical techniques geographical analysis and modelling methods are therefore required to analyse data and to facilitate the decision process at all levels Old geographical issues can find an answer thanks to new methods and instruments while new issues are developing challenging researchers towards new solutions This volume aims to contribute to the development of new techniques and methods to improve the process of knowledge acquisition The Geocomputational expression is related to the development and the application of new theories methods and tools in order to provide better solutions to complex geographical problems The geocomputational analysis discussed in this volume could be classified

according to three main domains of applications the first one related to spatial decision support system and to spatial uncertainty the second connected to artificial intelligence the third based on all spatial statistics techniques Design and Control of Intelligent Robotic Systems Dikai Liu, Lingfeng Wang, Kay Chen Tan, 2009-03-05 With the increasing applications of intelligent robotic systems in various fields the sign and control of these systems have increasingly attracted interest from researchers This edited book entitled Design and Control of Intelligent Robotic Systems in the book series of Studies in Computational Intelligence is a collection of some advanced research on design and control of intelligent robots The works presented range in scope from design methodologies to robot development Various design approaches and algorithms such as evolutionary computation neural networks fuzzy logic learning etc are included We also would like to mention that most studies reported in this book have been implemented in physical systems An overview on the applications of computational intelligence in bio inspired robotics is given in Chapter 1 by M Begum and F Karray with highlights of the recent progress in bio inspired robotics research and a focus on the usage of computational intelligence tools to design human like cognitive abilities in the robotic systems In Chapter 2 Lisa L Grant and Ganesh K Venayagamoorthy present greedy search particle swarm optimization and fuzzy logic based strategies for navigating a swarm of robots for target search in a hazardous environment with potential applications in high risk tasks such as disaster recovery and hazardous material detection

Rough Set Theory: A True Landmark in Data Analysis Ajith Abraham, Rafael Falcón, Rafael Bello, 2009-02-26 Part 1 of this book deals with theoretical contributions of rough set theory and parts 2 and 3 focus on several real world data mining applications The book thoroughly explores recent results in rough set research **Differential Evolution: A Handbook for Global Permutation-Based Combinatorial Optimization** Godfrey C. Onwubolu, Donald Davendra, 2008-12-23 What is combinatorial optimization Traditionally a problem is considered to be combinatorial if its set of feasible solutions is both finite and discrete i.e enumerable For example the traveling salesman problem asks in what order a salesman should visit the cities in his territory if he wants to minimize his total mileage see Sect 2.2.2 The traveling salesman problem's feasible solutions permutations of city labels comprise a finite discrete set By contrast Differential Evolution was originally designed to optimize functions defined on real spaces Unlike combinatorial problems the set of feasible solutions for real parameter optimization is continuous Although Differential Evolution operates internally with floating point precision it has been applied with success to many numerical optimization problems that have additionally been classified as combinatorial because their feasible sets are discrete For example the knapsack problem's goal is to pack objects of differing weight and value so that the knapsack's total weight is less than a given maximum and the value of the items inside is maximized see Sect 2.2.1 The set of feasible solutions vectors whose components are nonnegative integers is both numerical and discrete To handle such problems while retaining full precision Differential Evolution copies floating point solutions to a temporary vector that prior to being evaluated is truncated to the nearest feasible solution e.g by rounding the temporary parameters to the nearest nonnegative integer
