Name _____

1. A wave front is the portion of the medium's surface in which all particles are _____. The front is always _____ to the direction the wave is traveling.

Use dotted lines to draw the wave fronts created by these adjacent waves. Use an arrow to show the direction of the wave.

2. The turning back of a wave at a boundary of a new medium is called _____. If the new medium is very similar to the old, (most, little) will be transmitted and (most, little) will be reflected. For the following examples, consider the new medium to be very different from the old, so almost all of the wave will be _____.

Draw the reflected waves:

3. The Law of Reflection states: Both angles are drawn from the wave to the _____, which is _____ to the boundary. For the following, draw the normal, the reflected wave, labeling $\angle i$ and $\angle r$ reflection. With dotted lines, draw the wave fronts.

Handbook of Differential Equations: Evolutionary Equations C.M. Dafermos, Milan Pokorný, 2009-04-29 Handbook of Differential Equations Evolutionary Equations is the last text of a five volume reference in mathematics and methodology

This volume follows the format set by the preceding volumes presenting numerous contributions that reflect the nature of the area of evolutionary partial differential equations. The book is comprised of five chapters that feature the following:

- A thorough discussion of the shallow equations theory which is used as a model for water waves in rivers, lakes, and oceans.
- It covers the issues of modeling, analysis, and applications.
- Evaluation of the singular limits of reaction-diffusion systems where the reaction is fast compared to the other processes and applications that range from the theory of the evolution of certain biological processes to the phenomena of Turing and cross-diffusion instability.
- Detailed discussion of numerous problems arising from nonlinear optics at the high frequency and high intensity regime.
- Geometric and diffractive optics including wave interactions.
- Presentation of the issues of existence, blow-up, and asymptotic stability of solutions from the equations of solutions to the equations of linear and non-linear thermoelasticity.
- Answers to questions about unique space such as continuation and backward uniqueness for linear second-order parabolic equations.

Research mathematicians, mathematics lecturers and instructors, and academic students will find this book invaluable. Review of new results in the area. Continuation of previous volumes in the handbook series covering evolutionary PDEs. New content coverage of DE applications.

The Nonlinear Schrödinger Equation Catherine Sulem, Pierre-Louis Sulem, 2007-06-30. Filling the gap between the mathematical literature and applications to domains the authors have chosen to address the problem of wave collapse by several methods ranging from rigorous mathematical analysis to formal asymptotic expansions and numerical simulations.
