Wayfinding Paul Arthur, Romedi Passini, 2002-01-01 Wayfinding People Signs and Architecture has been reissued as a special limited edition to commemorate the 10th anniversary of the original publication by McGraw Hill and the death in 2001 of co author Paul Arthur. Authors Paul Arthur and Romedi Passini coined the terms signage and wayfinding: the use of pictograms, words, colours and architecture to help people find their way quickly and easily in a built environment. The book has become a standard on the subject for graphic designers and architects world wide. This attractive hard cover collectors edition contains several hundred illustrations.

Information Design Robert Jacobson, 2000-08-25 The contributors to this book are both cautionary and hopeful as they offer visions of how information design can be practiced diligently and ethically for the benefit of information consumers as well as producers. Information design is the newest of the design disciplines. As a sign of our times when the crafting of messages and meaning is so central to our lives, information design is not only important, it is essential. Contemporary information designers seek to edify more than to persuade, to exchange more than to foist upon. With ever more powerful technologies of communication we have learned that the issuer of designed information is as likely as the intended recipient to be changed by it for better or worse. The contributors to this book are both cautionary and hopeful as they offer visions of how information design can be practiced diligently and ethically for the benefit of information consumers as well as producers. They present various methods that seem to work such as sense making and way finding. They make recommendations and serve as guides to a still young but extraordinarily pervasive and persuasive field.

Designing Public Spaces in Hospitals Nicoletta Setola, Sabrina Borgianni, 2016-04-14 Designing Public Spaces in Hospitals illustrates that in addition to their aesthetic function, public spaces in hospitals play a fundamental role concerning people's satisfaction and experience of health care. The book highlights how spatial properties such as accessibility, visibility, proximity and intelligibility affect people's behavior and interactions in hospital public spaces. Based on the authors' research, the book includes detailed analysis of three hospitals and criteria that can support the design in circulation areas, arrival and entrance, first point of welcome, reception and the interface between city and hospital. basic research in spatial cognition Spatial cognition is a field that investigates the connection between the physical spatial world and the mental world Philosophers and researchers have posed various views concerning the relation between the physical and the mental worlds Plato considered pure concepts of thought as separate from their physical manifestations while Aristotle considered the physical and the mental realms as two aspects of the same substance Descartes a dualist discussed the interaction between body and soul through an interface organ and thus introduced a functional view that presented a challenge for the natural sciences and the humanities In modern psychology the relation between the physical and the cognitive space has been investigated using thorough experiments and in artificial intelligence we have seen views as diverse as problems can be solved on a representation of the world and a representation of the world is not necessary Today's spatial cognition work establishes a correspondence between the mental and the physical worlds by studying and exploiting their interaction it investigates how mental space and spatial reality join together in understanding the world and in interacting with it The physical and representational aspects are equally important in this work Almost all topics of cognitive science manifest themselves in spatial cognition
