

# Basic Transport Phenomena in Biomedical Engineering 4th Edition Fournier Solutions Manual

## Chapter 1 Solutions

**Problem 1.1.** Use the conversion factors

$$\frac{8.314\text{J}}{\text{mol K}} \times \frac{0.23901\text{cal}}{\text{J}} = 1.987 \frac{\text{cal}}{\text{mol K}}$$

**Problem 1.2.** Use Equation 1.2 to convert the temperature to degrees Celsius

$$t^{\circ}\text{C} = \frac{5}{9}(t^{\circ}\text{F} - 32) = \frac{5}{9}(98.6 - 32) = 37^{\circ}\text{C}$$

Now, use Equation 1.3 to convert the temperature from degrees Celsius to Kelvin

$$T^{\circ}\text{K} = t^{\circ}\text{C} + 273.15 = 37 + 273.15 = 310.15^{\circ}\text{K}$$

**Problem 1.3.** Use the conversion factors

$$2 \times 10^4 \mu\text{dynes} \times \frac{\text{dynes}}{10^6 \mu\text{dynes}} \times \frac{\text{N}}{10^5 \text{dynes}} \times \frac{\text{kN}}{10^3 \text{N}} = 2 \times 10^{-10} \text{kN}$$

**Problem 1.4.** Use the conversion factors

$$\frac{27 \mu\text{m}}{\text{hr}} \times \frac{10^{-6} \text{m}}{\mu\text{m}} \times \frac{0.0006214 \text{miles}}{\text{m}} \times \frac{\text{hr}}{60 \text{min}} \times \frac{\text{min}}{60 \text{sec}} = 4.66 \times 10^{-12} \frac{\text{miles}}{\text{sec}}$$

**Problem 1.5.** Use the conversion factors

$$48 \text{MW} \times \frac{10^6 \text{W}}{\text{MW}} \times \frac{\text{kg m}^2}{\text{sec}^2 \text{W}} \times \frac{10^3 \text{g}}{\text{kg}} \times \frac{100 \text{cg}}{\text{g}} \times \frac{3600^3 \text{sec}^3}{\text{hr}^3} \times \frac{100^2 \text{cm}^2}{\text{m}^2} = 2.24 \times 10^{27} \frac{\text{cgcm}^2}{\text{hr}^3}$$

$$48 \text{MW} \times \frac{10^6 \text{W}}{\text{MW}} \times \frac{\text{J}}{\text{sec W}} \times \frac{\text{kJ}}{10^3 \text{J}} \times \frac{60 \text{sec}}{1 \text{min}} = 2.88 \times 10^6 \frac{\text{kJ}}{\text{min}}$$

**Problem 1.6.** Use the conversion factors to get both values into units of mm per second and then compare the two values for the higher value.

## **Transport Phenomena Deen Solutions Manual:**

Solution's Manual - Transport Phenomena Fundamentals Second Edition Taylor & Francis Group, 2010-05-21

**Introduction to Transport Phenomena** William Thomson, 1999-02      **Solutions Manual to Accompany Elements of Transport Phenomena** Leighton E. Sissom, Donald R. Pitts, 1972      Solutions Manual to Accompany Transport Phenomena in Materials Processing E. J. Poirier, D. R. Poirier, G. H. Geiger, 1994 This text provides a teachable and readable approach to transport phenomena by providing numerous examples and applications The text leads the reader through the development and solution of relevant differential equations by applying familiar principles of conservation to numerous situations and by including many worked examples in each chapter The book is organized similarly to other texts in transport phenomena Section I deals with the properties and mechanics of fluid motion Section II with thermal properties and heat transfer and Section III with diffusion and mass transfer The authors depart from tradition by building on a presumed understanding of the relationships between the structure and properties of matter particularly in the chapters devoted to the transport properties Generous portions of the text numerous examples and many problems apply transport phenomena to materials processing      **Introduction to Chemical Engineering Fluid Mechanics** William M. Deen, 2016-08-15 Designed for introductory undergraduate courses in fluid mechanics for chemical engineers this stand alone textbook illustrates the fundamental concepts and analytical strategies in a rigorous and systematic yet mathematically accessible manner Using both traditional and novel applications it examines key topics such as viscous stresses surface tension and the microscopic analysis of incompressible flows which enables students to understand what is important physically in a novel situation and how to use such insights in modeling The many modern worked examples and end of chapter problems provide calculation practice build confidence in analyzing physical systems and help develop engineering judgment The book also features a self contained summary of the mathematics needed to understand vectors and tensors and explains solution methods for partial differential equations Including a full solutions manual for instructors available at [www.cambridge.org/deen](http://www.cambridge.org/deen) this balanced textbook is the ideal resource for a one semester course      Transport Phenomena in Materials Processing, Solutions Manual D. R. Poirier, G. H. Geiger, 1998-07-16 This text provides a teachable and readable approach to transport phenomena momentum heat and mass transport by providing numerous examples and applications which are particularly important to metallurgical ceramic and materials engineers Because the authors feel that it is important for students and practicing engineers to visualize the physical situations they have attempted to lead the reader through the development and solution of the relevant differential equations by applying the familiar principles of conservation to numerous situations and by including many worked examples in each chapter The book is organized in a manner characteristic of other texts in transport phenomena Section I deals with the properties and mechanics of fluid motion Section II with thermal properties and heat transfer and Section III with diffusion and mass transfer The authors depart from tradition by building on a

presumed understanding of the relationships between the structure and properties of matter particularly in the chapters devoted to the transport properties viscosity thermal conductivity and the diffusion coefficients In addition generous portions of the text numerous examples and many problems at the ends of the chapters apply transport phenomena to materials processing

Advanced Transport Phenomena John C. Slattery, 1999-06-28 The term transport phenomena describes the fundamental processes of momentum energy and mass transfer The author provides a thorough discussion of transport phenomena laying the foundation for understanding a wide variety of operations used by chemical engineers The book is arranged in three parallel parts covering the major topics of momentum energy and mass transfer Each part begins with the theory followed by illustrations of the way the theory can be used to obtain fairly complete solutions and concludes with the four most common types of averaging used to obtain approximate solutions A broad range of technologically important examples as well as numerous exercises are provided throughout the text Based on the author's extensive teaching experience a suggested lecture outline is also included This book is intended for first year graduate engineering students it will be an equally useful reference for researchers in this field Solutions manual available

**Analysis of Transport Phenomena** William Murray Deen, 2012 Analysis of Transport Phenomena Second Edition provides a unified treatment of momentum heat and mass transfer emphasizing the concepts and analytical techniques that apply to these transport processes The second edition has been revised to reinforce the progression from simple to complex topics and to better introduce the applied mathematics that is needed both to understand classical results and to model novel systems A common set of formulation simplification and solution methods is applied first to heat or mass transfer in stationary media and then to fluid mechanics convective heat or mass transfer and systems involving various kinds of coupled fluxes FEATURES Explains classical methods and results preparing students for engineering practice and more advanced study or research Covers everything from heat and mass transfer in stationary media to fluid mechanics free convection and turbulence Improved organization including the establishment of a more integrative approach Emphasizes concepts and analytical techniques that apply to all transport processes Mathematical techniques are introduced more gradually to provide students with a better foundation for more complicated topics discussed in later chapters
