Selected Water Resources Abstracts ,1982 **New Zealand Journal of Crop and Horticultural Science** ,2005 Physiological Plant Ecology IV O. L. Lange, P. S. Nobel, C. B. Osmond, H. Ziegler, 1983-09-01

O L LANGE P S NOBEL C B OSMOND and H ZIEGLER In the last volume of the series Physiological Plant Ecology we have asked contributors to address the bases of ecosystem processes in terms of key plant physiological properties It has often been suggested that it is not profitable to attempt analysis of complex living systems in terms of the properties of component individuals or populations i e the whole is more than the sum of its parts Nevertheless assessments of ecological research over the last century show that other approaches are seldom more helpful Although it is possible to describe complex systems of living organisms in holistic terms the most useful descriptions are found in terms of the birth growth and death of individuals This allows analysis of performance of the parts of the whole considering their synergistic and antagonistic interrelationships and is the basis for a synthesis which elucidates the specific properties of a system Thus it seems that the description of ecosystem processes is inevitably anchored in physiological understanding If enquiry into complex living systems is to remain a scientific exercise it must retain tangible links with physiology Of course as was emphasized in Vol 12A not all of our physiological understanding is required to explore ecosystem processes For pragmatic purposes the whole may be adequately represented as a good deal less than the sum of its parts
