Vocabulary: cutbank, discharge, erosion, flood, floodplain, meander, meandering river, oxbow lake, point bar, river speed, sediments, slope, streambank, streambed, tributary, weathering

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. The image above shows a raging mountain river in full **flood**. What do you think is making the water brown in color? The water is brown because the sediments it is carrying
2. What impact do you think the flooding river will have on the surrounding landscape? The river will deteriorate or erode the riverbanks and deposit the sand over time.

Gizmo Warm-up

If you stand by the bank of a river, it may seem that very little is happening. But over thousands and even millions of years, rivers can have a profound effect on the landscape. In the *River Erosion* Gizmo, you will see how rivers move materials and how they affect landscapes.

To begin, check that **Mountain stream** and **Short-term erosion** are selected. The Gizmo shows a typical stream that is moving through a hilly area.

1. The two movie cameras (**1** and **2**) allow you to observe different parts of the stream up close.
Click on the left movie camera. What do you see? Large rocks on the streambed, pebbles in the water, and a fish ✓
2. **Sediments** are small rock fragments such as sand or pebbles. What evidence do you see that sediments are being transported? Sediments (particles) are flowing left to right with the current (white box) ✓
3. Now select the right movie camera to see the bank of the mountain stream. What is happening to sediments on the bank? The bank is eroding and sediments are falling into the stream ✓
