Kasai, 2022-07-07 **Complex Network Analysis in Python** Dmitry Zinoviev, 2018-01-19 Construct, analyze and visualize networks with networkx, a Python language module. Network analysis is a powerful tool you can apply to a multitude of datasets and situations. Discover how to work with all kinds of networks including social product temporal spatial and semantic networks. Convert almost any real world data into a complex network such as recommendations on co using cosmetic products, muddy hedge fund connections and online friendships. Analyze and visualize the network and make business decisions based on your analysis. If you're a curious Python programmer, a data scientist or a CNA specialist interested in mechanizing mundane tasks, you'll increase your productivity exponentially. Complex network analysis used to be done by hand or with non-programmable network analysis tools but not anymore. You can now automate and program these tasks in Python. Complex networks are collections of connected items: words, concepts or people. By exploring their structure and individual elements, we can learn about their meaning, evolution and resilience. Starting with simple networks, convert real life and synthetic network graphs into networkx data structures. Look at more sophisticated networks and learn more powerful machinery to handle centrality calculation, block modeling and clique and community detection. Get familiar with presentation quality network visualization tools both programmable and interactive such as Gephi, a CNA explorer. Adapt the patterns from the case studies to your problems. Explore big networks with NetworkKit, a high performance networkx substitute. Each part in the book gives you an overview of a class of networks, includes a practical study of networkx functions and techniques and concludes with case studies from various fields including social networking, anthropology, marketing and sports analytics. Combine your CNA and Python programming skills to become a better network analyst, a more accomplished data scientist and a more versatile programmer. What You Need: You will need a Python 3.x installation with the following additional modules: Pandas 0.18, NumPy 1.10, matplotlib 1.5, networkx 1.11, python-louvain 0.5, NetworkKit 3.6 and generalizedsimilarity. We recommend using the Anaconda distribution that comes with all these modules except for python-louvain, NetworkKit and generalizedsimilarity, and works on all major modern operating systems. **Social Network Analysis**

Applied to Team Sports Analysis Filipe Manuel Clemente, Fernando Manuel Lourenço Martins, Rui Sousa Mendes, 2015-11-06 Explaining how graph theory and social network analysis can be applied to team sports analysis. This book presents useful approaches, models and methods that can be used to characterise the overall properties of team networks and identify the prominence of each team player. Exploring the different possible network metrics that can be utilised in sports analysis, their possible applications and variances from situation to situation, the respective chapters present an array of illustrative case studies. Identifying the general concepts of social network analysis and network centrality metrics, readers are shown how to generate a methodological protocol for data collection. As such, the book provides a valuable
