Four Battlegrounds Paul Scharre, 2023-02-28 An NPR 2023 Books We Love Pick One of the Next Big Idea Club s Must Read Books An invaluable primer to arguably the most important driver of change for our future P W Singer author of *Burn In* An award winning defense expert tells the story of today s great power rivalry the struggle to control artificial intelligence A new industrial revolution has begun Like mechanization or electricity before it artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power especially among the AI superpowers China the United States and Europe Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game changing technology and dominate the future *Four Battlegrounds* argues that four key elements define this struggle data computing power talent and institutions Data is a vital resource like coal or oil but it must be collected and refined Advanced computer chips are the essence of computing power control over chip supply chains grants leverage over rivals Talent is about people which country attracts the best researchers and most advanced technology companies The fourth battlefield is maybe the most critical the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy society and especially their military Scharre s account surges with futuristic technology He explores the ways AI systems are already discovering new strategies via millions of war game simulations developing combat tactics better than any human tracking billions of people using biometrics and subtly controlling information with secret algorithms He visits China s National Team of leading AI companies to show the chilling

Yet he concludes that those tensions inherent to our democratic system create resilience and resistance to autocracy in the face of overwhelmingly powerful technology. Engaging and direct. *Four Battlegrounds* offers a vivid picture of how AI is transforming warfare, global security and the future of human freedom and what it will take for democracies to remain at the forefront of the world order.

[The Emergence of American Amphibious Warfare, 1898—1945](#) David Nasca, 2020-05-15. *The Emergence of American Amphibious Warfare 1898-1945* examines how the United States became a military superpower through the use of amphibious operations. While other major world powers pursued and embraced different weapons and technologies to create different means of waging war, the United States was one of the few countries that spent decades training, developing and employing amphibious warfare to pursue its national interests. Commonly seen as dangerous and costly, amphibious warfare was carefully modernized, refined and promoted within American political and military circles for years by a small motley group of military mavericks, intellectuals, innovators and crackpots. This generational cast of underdogs and unlikely heroes were able to do the impossible by predicting and convincing America's leadership how the United States should fight World War II. David Nasca reveals that despite the new ways that states have to project military power today as seen with airpower, nuclear weapons, cyber warfare and special operators, amphibious warfare has proven to be the most important element in transforming the theater of battle. In understanding how amphibious warfare allowed the United States to achieve geopolitical supremacy, competitor states are now looking at America's amphibious past for clues in how to challenge the United States' global leadership and expand its power and influence in the world.

Gender and Drone Warfare Lindsay Clark, 2019-06-20. This book investigates how drone warfare is deeply gendered and how this can be explored through the methodological framework of Haunting. Utilising original interview data from British Reaper drone crews, the book analyses the way killing by drones complicates traditional

understandings of masculinity and femininity in warfare As their role does not include physical risk drone crews have been critiqued for failing to meet the masculine requirements necessary to be considered warriors and have been derided for feminising war However this book argues that drone warfare and the experiences of the crews exceeds the traditional masculine feminine binary and suggests a new approach to explore this issue The framework of Haunting presented here draws on the insights of Jacques Derrida Avery Gordon and others to highlight four key themes complex personhood in hyper visibility disturbed temporality and power as frames through which the intersection of gender and drone warfare can be examined This book argues that Haunting provides a framework for both revealing and destabilising gendered binaries of use for feminist security studies and International Relations scholars as well as shedding light on British drone warfare This book will be of interest to students of gender studies sociology war studies and critical security studies

The British Military Revolution of the 19th Century Daniel R. LeClair, 2019-11-11 From the Crimean War through the Second Boer War the British Empire sought to solve the Great Gun Question to harness improvements to ordnance small arms explosives and mechanization made possible by the Industrial Revolution The British public played a surprising but overlooked role offering myriad suggestions for improvements to the civilian led War Office Meanwhile politicians and army leaders argued over control of the country's ground forces in a decades long struggle that did not end until reforms of 1904 put the military under the Secretary of State for War Following the debate in the press voters put pressure on both Parliament and the War Office to modernize ordnance and military administration The Great Gun Question was as much about weaponry as about who ultimately controlled military power Drawing on ordnance committee records and contemporary news reports this book fills a gap in the history of British military technology and army modernization prior to World War I
