Although the research findings indicate a need for a more comprehensive approach to the management of the elderly, the study also has some limitations. First, the study was conducted in a single hospital and may not be generalizable to other settings. Second, the study was a cross-sectional study and may not capture changes over time. Third, the study did not include a control group, which may have influenced the results. Finally, the study did not include a long-term follow-up, which may have provided more information on the outcomes of the intervention.
