Zinc Understanding The Elements Of The Periodic Table:

An Introduction to Chemistry Michael Mosher, Paul Kelter, 2023-03-18 This textbook is written to thoroughly cover the topic of introductory chemistry in detail with specific references to examples of topics in common or everyday life. It provides a major overview of topics typically found in first year chemistry courses in the USA. The textbook is written in a conversational question based format with a well defined problem solving strategy and presented in a way to encourage readers to think like a chemist and to think outside of the box. Numerous examples are presented in every chapter to aid students and provide helpful self learning tools. The topics are arranged throughout the textbook in a traditional approach to the subject with the primary audience being undergraduate students and advanced high school students of chemistry.

Around the World in 18 Elements David Scott, 2015-11-06 Written with both students and educators in mind, this book presents a tour of the elements found in the British A level syllabus. Each chapter presents a key concept of chemistry in the context of the element, instilling a wider background in chemistry to the reader which can then be tested by questions in the text. Students of chemistry will enjoy this informative approach to revision while educators will gain inspiration for planning lessons and discussing concepts. International baccalaureate and foundation year students will also benefit from the topics presented in this accessible textbook.
