Lesh,2014-07-16 This special issue of Mathematical Thinking and Learning describes models and modeling perspectives toward mathematics problem solving learning and teaching The concern is not only the mature forms of models and modeling in communities of scientists and mathematicians but also the need to initiate students in these forms of thought The contributions of this issue suggest a variety of ways that students children through adults can be introduced to highly productive forms of modeling practices Collectively they illustrate how modeling activities often lead to remarkable mathematical achievements by students formerly judged to be too young or too lacking in ability for such sophisticated and powerful forms of mathematical thinking The papers also illustrate how modeling activities often create productive interdisciplinary niches for mathematical thinking learning and problem solving that involve simulations of similar situations that occur when mathematics is useful beyond school Developing Mathematical Thinking Jonathan D. Katz,2014-07-07 In this country we have done a poor job of helping students come to see the wonder beauty and power of mathematics Standards can be brought into the picture but unless we think about what it means to truly engage students in mathematics we will continue to be unsuccessful The goal of this book is to begin to change the way students experience mathematics in the middle and high school classrooms In this book you will find a theoretical basis for this approach to
