

EXPERIMENT NINE

Part I - The Standardization of Thiosulfate Solutions

In general, thiosulfate solutions are standardized by indirect methods. Primary-standard oxidizing agents such as KIO_3 , As_2O_3 , or $\text{K}_2\text{Cr}_2\text{O}_7$ are used to liberate an equivalent amount of I_2 from fairly concentrated I^- solutions. The resulting I_3^- is then titrated with thiosulfate to a starch endpoint. In this course we shall use potassium dichromate as the oxidizing agent.

Iodine is liberated according to the equation

For this reaction to be quantitative the H^+ and I^- concentrations, and the time must all be controlled. The equilibrium in reaction (1) lies well to the right at $\text{pH} < 4$, but the rate of the oxidation is very low unless the hydrogen ion concentration is greater than 0.2 M and the iodide concentration is greater than 0.05 M. Under these conditions the reaction is quantitatively complete in 5 minutes.

If the H^+ concentration exceeds 0.4 M, air oxidation of iodide can also occur by the reaction,

Up to 0.4 M acid the rate of reaction (2) is low enough that solutions can stand in air up to 10 minutes without appreciable amounts of iodine appearing. Reaction (2) is, however, catalyzed by light and various metal ions, including Cr^{3+} . For this reason tartaric acid is added to the system to complex the Cr^{3+} formed by reaction (1).

Saturated solutions of I_2 in pure water are only 1.3×10^{-3} M, and the vapor pressure above these solutions is so great that large amounts of iodine escape. In the presence of excess iodide ion, iodine becomes soluble by the reaction,

Triiodide solutions are reasonably stable. Moreover, the starch-triiodide complex is much more intensely colored (blue) than its I_2 counterpart (pale yellow-brown) so the end point of the titration is sharpened.

The soluble fraction of vegetable starches, B-amylase, is believed to hold I_3^- inside the helical chains of its polymeric (mol. wt. 10,000-50,000) structure. The formation of the blue complex is reversible provided the I_3^- concentration is rather low, otherwise a red-violet complex is formed irreversibly and the end point may be obscured. Starch solutions customarily are prepared with traces of mercuric iodide or boric acid to impede bacterial decomposition of the solutions.

1930s through the 1970s chemistry sets were among the most popular Christmas gifts selling in the millions. But two decades ago real chemistry sets began to disappear as manufacturers and retailers became concerned about liability. The Illustrated Guide to Home Chemistry Experiments steps up to the plate with lessons on how to equip your home chemistry lab, master laboratory skills, and work safely in your lab. The bulk of this book consists of 17 hands-on chapters that include multiple laboratory sessions on the following topics: Separating Mixtures, Solubility and Solutions, Colligative Properties of Solutions, Introduction to Chemical Reactions, Stoichiometry, Reduction/Oxidation, Redox Reactions, Acid-Base Chemistry, Chemical Kinetics, Chemical Equilibrium, and Le Chatelier's Principle, Gas Chemistry, Thermochemistry and Calorimetry, Electrochemistry, Photochemistry, Colloids and Suspensions, Qualitative Analysis, Quantitative Analysis, Synthesis of Useful Compounds, Forensic Chemistry. With plenty of full-color illustrations and photos, Illustrated Guide to Home Chemistry Experiments offers introductory-level sessions suitable for a middle school or first-year high school chemistry laboratory course and more advanced sessions suitable for students who intend to take the College Board Advanced Placement (AP) Chemistry exam. A student who completes all of the laboratories in this book will have done the equivalent of two full years of high school chemistry lab work or a first-year college general chemistry laboratory course. This hands-on introduction to real chemistry using real equipment, real chemicals, and real quantitative experiments is ideal for the many thousands of young people and adults who want to experience the magic of chemistry.

Laboratory Manual of Medicinal Chemistry III Dr. Niranjan S. Mahajan, Dr. Shrinivas D. Joshi, Dr. T. Prabha, Mr. Shrikrishna S. Maske, We are very pleased to put forth the Laboratory Manual of Medicinal Chemistry III. This manual is prepared as per PCI B Pharm course regulations 2014 and is divided into three sections for laboratory techniques, determination of oil values, and preparations of organic compounds. The methods of all the experiments are added from the recent research papers so that the advancement in the methods or apparatus can be addressed. This manual is designed for outcome-based education, and each experiment is arranged in a uniform way such as practical significance, practical outcomes, Pre-Operations (PrOs) and its mapping with course outcomes, theory resources, used procedure, precautions, observations, result, conclusion, references, and synopsis questions. Each experiment offers an opportunity to perform practical work, allowing students to gain proficiency in effectively managing equipment, handling glassware, chemicals, and reagents, and writing analytical reports. In addition, questions are provided at the end of the experiments to enhance students' knowledge, which will be beneficial for them as they pursue higher studies. During the laboratory period, you will have to multitask while you are doing the experiment. It is essential to document properly what you do and what you observe while doing the practical. Always plan your work ahead and think about what you are doing, why you are doing it, what is happening, and what you can conclude from your experiment. We acknowledge the help and co-operation extended by various persons in bringing out this manual. We are highly indebted to the authors of various books and articles mentioned in the reference, which became a major source of information for writing this manual. We also thank the publishers.
