Three Fs Using Survive Failure:

Predicting Recidivism Using Survival Models Peter Schmidt, Ann D. Witte, 2012-12-06 Our interest in the statistical modeling of data on the timing of recidivism began in the mid 1970s when we were both junior members of the economics department at the University of North Carolina At that time methods of analyzing qualitative and limited variables were being developed rapidly in the econometric literature and we became interested in finding a suitable application for these new methods Data on the timing of recidivism offered unique and interesting statistical challenges such as skewness of the distribution and the presence of censoring Being young and foolish we decided it would be fun to try something really difficult And being young and ignorant we were blissfully unaware of the concurrent developments in the statistical modeling of survival times that were then appearing in the biostatistics operations research and criminological literatures In the course of some earlier research we had learned that the North Carolina Department of Correction had an unusually well developed data base on their inmates We approached the Department and asked if they would be interested in working with us to develop models that would predict when their former charges would return to their custody They agreed because they were interested in using such models to evaluate rehabilitative programs and alternative prison management systems and to help project future prison populations The Statistical Analysis of Multivariate Failure Time Data Ross L.

Prentice, Shanshan Zhao, 2019-05-14 The Statistical Analysis of Multivariate Failure Time Data A Marginal Modeling Approach provides an innovative look at methods for the analysis of correlated failure times The focus is on the use of marginal single and marginal double failure hazard rate estimators for the extraction of regression information For example in a context of randomized trial or cohort studies the results go beyond that obtained by analyzing each failure time outcome in a univariate fashion The book is addressed to researchers practitioners and graduate students and can be used as a reference or as a graduate course text Much of the literature on the analysis of censored correlated failure time data uses frailty or copula models to allow for residual dependencies among failure times given covariates In contrast this book provides a detailed account of recently developed methods for the simultaneous estimation of marginal single and dual outcome hazard rate regression parameters with emphasis on multiplicative Cox models Illustrations are provided of the utility of these methods using Women's Health Initiative randomized controlled trial data of menopausal hormones and of a low fat dietary pattern intervention As byproducts these methods provide flexible semiparametric estimators of pairwise bivariate survivor functions at specified covariate histories as well as semiparametric estimators of cross ratio and concordance functions given covariates The presentation also describes how these innovative methods may extend to handle issues of dependent censorship missing and mismeasured covariates and joint modeling of failure times and covariates setting the stage for additional theoretical and applied developments This book extends and continues the style of the classic Statistical Analysis of Failure Time Data by Kalbfleisch and Prentice Ross L Prentice is Professor of Biostatistics at the Fred

Kleinbaum, Mitchel Klein, 2011-10-15 An excellent introduction for all those coming to the subject for the first time New material has been added to the second edition and the original six chapters have been modified The previous edition sold 9500 copies world wide since its release in 1996 Based on numerous courses given by the author to students and researchers in the health sciences and is written with such readers in mind Provides a user friendly layout and includes numerous illustrations and exercises Written in such a way so as to enable readers learn directly without the assistance of a classroom instructor Throughout there is an emphasis on presenting each new topic backed by real examples of a survival analysis investigation followed up with thorough analyses of real data sets

Survival Tactics Ted Sun, 2007-07-30 By any measure the movement toward entrepreneurship is increasing each year data from the Small Business Administration indicates that there are over 5 million small businesses in operation in the United States And while many resources provide practical information to guide the entrepreneur or small business owner through the challenges of establishing managing and growing their business few tackle the more personal side of entrepreneurship in a rigorous fashion According to a recent Gallup poll seven out of ten high school students report that they want to start and run their own business Every year five million Americans launch their own ventures according to the Small Business Administration By any measure the movement toward entrepreneurship is increasing each year While many resources provide practical information to guide the entrepreneur or small business owner through the challenges of establishing managing and growing their business few tackle the more personal side of entrepreneurship in a rigorous fashion As Ted Sun argues countless people are entering entrepreneurship in one form or another Most have no clue how to be one
