Technology Works Patricia Barnes-Svarney,1998-02-24 DescriptionNamed one of Library Journal s Best Sci Tech Books in 1991 How the New Technology Works was praised as containing a wealth of basic information on the frontiers of high technology Now this user friendly guide has been substantially updated It explains more than 40 high tech topics in clear easy to read language Among the new topics covered in this fascinating reference work are micromachining nanotechnology biotechnology planetary spacecraft charged coupled devices CCD global positioning systems GPS and circuits The original entries have also been updated to reflect the latest technological developments in fields such as genetic engineering lasers networking optical data storage robotics and supercomputers Handbook of Defence Electronics and Optronics Anil K. Maini,2018-03-26 Handbook of Defence Electronics and Optronics Anil K Maini Former Director Laser Science and Technology Centre India First complete reference on defence electronics and optronics Fundamentals Technologies and Systems This book provides a complete account of defence electronics and optronics The content is broadly divided into three categories topics specific to defence electronics topics relevant to defence optronics and topics that have both electronics and optronics counterparts The book covers each of the topics in their entirety from fundamentals to advanced concepts military systems in use and related technologies thereby leading the reader logically from the operational basics of military systems to involved technologies and battlefield deployment and applications Key features Covers fundamentals operational aspects involved technologies and application potential of a large cross section of military systems Discusses emerging technology trends and development and deployment status of next generation military systems wherever applicable in each category of military systems Amply illustrated with approximately 1000 diagrams and photographs and around 30 tables Includes salient features technologies and deployment aspects of hundreds of military systems including military radios ground and surveillance radars laser range finder and target designators night visions devices EW and EO jammers laser guided munitions and military communications equipment and satellites Handbook of Defence Electronics and Optronics is an essential guide for graduate students R D scientists engineers engaged in manufacturing defence equipment and professionals handling the operation and maintenance of these systems in the Armed Forces **Hollow Core Optical Fibre Based Gas Discharge Laser Systems** Adrian Love,2018-06-18 The research in this book represents the culmination of a drive to build the first discharge gas laser unencumbered by the effects of diffraction This breakthrough has been achieved

through careful implementation of a discharge within a hollow core optical fibre and by developing measurement and analysis techniques to demonstrate laser action in an experimental optical cavity Gas lasers were amongst the earliest laser types to be demonstrated and commercialised but it was recognised that noble gas lasers were limited by the minimum bore diameter of the laser tube which is set by diffraction The advent in 2011 of hollow optical fibres with optical and physical properties suitable for gas discharge lasers opened up the opportunity to break this diffraction limit Using a mixture of helium and xenon gas lasing in the mid infrared range was achieved using a 100 μ m core flexible hollow optical fibre which at 1m long is several hundred times the diffraction limited Rayleigh length *Lasers and Optoelectronics* Anil K.

Maini, 2013-08-05 With emphasis on the physical and engineering principles this book provides a comprehensive and highly accessible treatment of modern lasers and optoelectronics Divided into four parts it explains laser fundamentals types of lasers laser electronics optoelectronics and laser applications covering each of the topics in their entirety from basic fundamentals to advanced concepts Key features include exploration of technological and application related aspects of lasers and optoelectronics detailing both existing and emerging applications in industry medical diagnostics and therapeutics scientific studies and Defence simple explanation of the concepts and essential information on electronics and circuitry related to laser systems illustration of numerous solved and unsolved problems practical examples chapter summaries self evaluation exercises and a comprehensive list of references for further reading This volume is a valuable design guide for R D engineers and scientists engaged in design and development of lasers and optoelectronics systems and technicians in their operation and maintenance The tutorial approach serves as a useful reference for under graduate and graduate students of lasers and optoelectronics also PhD students in electronics optoelectronics and physics
