Chatterbox, 1920 *Game Theoretic Analysis* Leon A Petrosyan, David W K Yeung, 2019-10-14 This is a collection of recent novel contributions in game theory from a group of prominent authors in the field It covers Non cooperative Games Equilibrium Analysis Cooperative Games and Axiomatic Values in static and dynamic contexts Part 1 Non cooperative Games and Equilibrium Analysis In game theory a non cooperative game is a game with competition between individual players and in which only self-enforcing e.g. through credible threats alliances or competition between groups of players called coalitions are possible due to the absence of external means to enforce cooperative behavior e.g. contract law as opposed to cooperative games In fact non cooperative games are the foundation for the development of cooperative games by acting as the status quo Non cooperative games are generally analysed through the framework of equilibrium which tries to predict players' individual strategies and payoffs Indeed equilibrium analysis is the centre of non cooperative games This volume on non cooperative games and equilibrium analysis contains a variety of non cooperative games and non cooperative game equilibria from prominent authors in the field Part 2 Cooperative Games and Axiomatic Values It is well known that non cooperative behaviours in general would not lead to a Pareto optimal outcome Highly undesirable outcomes like the prisoner's dilemma and even devastating results like the tragedy of the commons could appear when the involved parties only care about their individual interests in a non cooperative situation Cooperative games offer the possibility of obtaining socially optimal and group efficient solutions to decision problems involving strategic actions In addition axiomatic values serve as guidance for establishing cooperative solutions This volume on cooperative games and axiomatic values presents a collection of

cooperative games and axiomatic values from prominent authors in the field
