However communication techniques concepts and solutions which have been developed so far treat these issues separately so that there arises a need for communication researchers and practitioners in different fields engineering science and arts to meet share their experience and explore all possibilities of developing integrated and advanced solutions which incorporate ideas from such disciplines as communication arts art design linguistics Web technologies computer system architecture and protocols computer science and artificial intelligence. INTELLCOMM 2004 was jointly sponsored by IFIP WG 6.7 Smart Networks and WG 6.4 Internet Applications Engineering and aimed to provide an international forum which brings academia researchers practitioners and service providers together. The discussion areas covered the latest research topics and advanced technological solutions in the area of intelligence in communication systems ranging from architectures for adaptable networks services and Semantic Web.

Web service technologies to intelligent service application interface and intelligent human interaction. INTELLCOMM 2004 received 112 paper submissions from 28 countries. From these 24 were accepted and are included in this proceedings.
