The ubiquitous implementation of a specific networking standard has led to an incredible dependence on the applications enabled by it. Today we use the TCP IP protocols and the Internet not only for entertainment and information but to conduct our business by performing transactions buying and selling products and delivering services to customers. We are continually extending the set of applications that leverage TCP IP thereby driving the need for further infrastructure support. It is our hope that both the novice and the expert will find useful information in this publication.

SIP Security Dorgham Sisalem, John Floroiu, Jiri Kuthan, Ulrich Abend, Henning Schulzrinne, 2009-03-23 This book gives a detailed overview of SIP specific security issues and how to solve them. While the standards and products for VoIP and SIP services have reached market maturity, security and regulatory aspects of such services are still being discussed. SIP itself specifies only a basic set of security mechanisms that cover a subset of possible security issues. In this book, the authors survey important aspects of securing SIP based services. This encompasses a description of the problems themselves and the standards based solutions for such problems. Where a standards based solution has not been defined, the alternatives are discussed and the benefits and constraints of the different solutions are highlighted. Key Features Will help the readers to understand the actual problems of using and developing VoIP services and to distinguish between real problems and the general hype of VoIP security. Discusses key aspects of SIP security including authentication, integrity, confidentiality, non repudiation, and signalling. Assesses the real security issues facing users of SIP and details the latest theoretical and practical solutions to SIP Security issues. Covers secure SIP access, inter provider secure communication, media security, security of the IMS infrastructures as well as VoIP services vulnerabilities and countermeasures against Denial of Service attacks and VoIP spam. This book will be of interest to IT staff involved in deploying and developing VoIP service users of SIP network engineers, designers, and managers.
