## Installation

### Sensor and Wheel Magnet

1. Position the sensor unit to the inside of either the right or left fork blade anywhere from 3-6 inches up from the fork blade tip. Attach the sensor to the fork blade with the quick tie but do not tighten the tie, completely until final adjustment is complete.
2. Attach the wheel magnet to a spoke, aligning the magnet with the sensor so it faces and intersects the top polished line of edges on the sensor. The magnet should have 1-2 mm clearance from the sensor. If the sensor and magnet are too close or touching, rotate the sensor unit toward the back of the fork blade until adequate clearance is achieved. Carefully tighten the Quick Tie making sure you maintain the proper clearance between the magnet and the sensor. Trim the excess Quick Tie strip using a scissors or fingernail clippers. Tighten the magnet screw, but be careful not to overtighten as this can damage the fitting.

### Sensor Wiring and Bracket

Sensor wires must not be wrapped together with other electrical wires (light, horn, etc.) This may cause wiring computer readings.

1. Route the sensor wire up the back of the fork blade or wind the wire around the blade, making sure that the wire is not loose and that you leave enough wire to reach the handlebar. Secure the wire to the fork blade immediately above the sensor and at the top of the fork blade, using the adhesive strips that are provided.
2. Wind the wire upward around the front brake cable until the wire is adjacent to the handlebar, allowing enough slack for free movement of the steering assembly and cables.
3. Attach the bracket to the handlebar on either side of the stem. The bracket goes onto the handlebar with the attachment screw and wire toward the inner side of the bar. Use the appropriate rubber shim between the bracket and handlebar to provide a secure fit.
