Trends In Ecological Research For The 1980s Nato Conference Series I Ecology:

Trends in Ecological Research for the 1980s June H. Cooley, 2013-03-13 Is ecology at a crossroad After three decades of rapid though somewhat anarchic development many ecologists now are beginning to ask this question They have the feeling of no longer belonging to a unified and mature scientific discipline Many of them claim to be mere empiricists whereas others are proud to be considered theoreticians Each side has its own journals and holds its own specialists meetings tending to disregard the achievements of the other The communication gap between the two schools is quickly widening to the detriment of both To make things worse the word ecology now has a different meaning for the professional biologists and the general public Ecology is still considered as a creditable though rather soft scientific discipline by the former whereas it is perceived as a new non conformist political philosophy by the latter Empirical ecologists are fundamentally naturalists who enjoy the immense complexity of the natural world and devote their lifetimes to the description of the many adaptive characteristics morphological biological or behavioral of the hundreds of thousands of species sharing the earth with us They generally are ignorant of if not allergic to the use of any mathematical representation of living phenomena They feel that ecological theory is rapidly becoming a mathematical game that has lost any contact with the realities of life Tropical Rainforest Research — Current Issues D.S. Edwards, W.E. Booth, S.C. Choy, 1996-06-30 This volume contains 53 of the papers presented at the Conference on Tropical Rainforest Research Current Issues which was held in Brunei Darussalam in April 1993 The book provides an overview of current knowledge particularly with respect to south east Asia and is divided into three sections Biodiversity Forest Dynamics and Socioeconomics The Biodiversity section emphasises the vast range of life forms in tropical forests and considers the theory and practice of estimating species richness and spatial distribution while contributions on Forest Dynamics provide a better understanding of the maintenance of this species richness With an improved background of ideas on rainforest dynamics and biodiversity better management and conservation strategies are possible and some of these are explored in the papers on Socioeconomics The need to demonstrate the total worth of tropical forests to ensure their conservation is taken up by a number of contributors **Igapó (Black-water flooded forests) of the Amazon Basin** Randall W. Myster, 2018-10-22 Igap forests are a common part of the Amazon whose ecosystems are critical to our shared human future The introduction addresses the structure function and dynamics of igap forests in the Amazon basin focusing on their uniqueness due to their high level of complexity defined as the many ways that different components of igap forests in the Amazon basin ecosystem interact and also on how those interactions are on a higher order compared to other tropical forests The text then breaks down the igap ecosystem using these sections 1 Igap forests over space and time 2 Water light and soils 3 The carbon cycle 4 Litter fungi and invertebrates 5 Vertebrates 6 Plant population studies 7 Plant community studies and 8 Human impacts and management Experts from around the world serve as chapter authors that review what is known about their specific part of the igap ecosystem what research they have done and also

 of the thoroughly revised and updated guide to the study of biodiversity in insects The second edition of Insect Biodiversity
 Science and Society brings together in one comprehensive text contributions from leading scientific experts to assess the
 influence insects have on humankind and the earth s fragile ecosystems Revised and updated this new edition includes
 information on the number of substantial changes to entomology and the study of biodiversity It includes current research on
 insect groups classification regional diversity and a wide range of concepts and developing methodologies The authors
 examine why insect biodiversity matters and how the rapid evolution of insects is affecting us all This book explores the wide
 variety of insect species and their evolutionary relationships Case studies offer assessments on how insect biodiversity can
 help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of
 insect species will have on the world This important text Explores the rapidly increasing influence on systematics of
 genomics and next generation sequencing Includes developments in the use of DNA barcoding in insect systematics and in
 the broader study of insect biodiversity including the detection of cryptic species Discusses the advances in information
 science that influence the increased capability to gather manipulate and analyze biodiversity information Comprises scholarly
 contributions from leading scientists in the field Insect Biodiversity Science and Society highlights the rapid growth of insect
 biodiversity research and includes an expanded treatment of the topic that addresses the major insect groups the
 zoogeographic regions of biodiversity and the scope of systematics approaches for handling biodiversity data *Urban

 affected Predictions of global species extinction rates based on forest loss range 1% to 10% each decade Because arthropods
 comprise the largest component of animal species richness it is inevitable that many arthropod species will become extinct
 Millions of these species are thought to live in the forest canopy During the last twenty years recognition of the importance of
 canopy arthropods to global biodiversity and the crucial roles arthropods play in forests has led to a revolution in the study

and understanding of the arthropod community structure in the forest canopy Recent advances have been greatly aided by the development of improved sampling techniques and new methods of access to the forest canopy Canopy Arthropods brings together for the first time a wide range of the most recent studies of arthropods living in forest canopies and comes from a truly international team of contributors **Neotropical Biodiversity and Conservation** Arthur C.
