performed in a clinical setting at the time of patient consultation generating a rapid test result that enables informed and timely clinical action to be taken on patient care. It offers patients greater convenience and access to health services and helps to improve clinical outcomes. POCT also provides innovative solutions for the detection and management of chronic acute and infectious diseases in settings including family practices, Indigenous medical services, community health facilities, rural and remote areas and in developing countries where health care services are often geographically isolated from the nearest pathology laboratory. A Practical Guide to Global Point of Care Testing shows health professionals how to set up and manage POCT services under a quality assured, sustainable, clinically and culturally effective framework as well as understand the wide global scope and clinical applications of POCT. The book is divided into three major themes: the management of POCT services, a global perspective on the clinical use of POCT, and POCT for specific clinical settings. Chapters within each theme are written by experts and explore wide ranging topics such as selecting and evaluating devices, POCT for diabetes, coagulation disorders, HIV, malaria and Ebola, and the use of POCT for disaster management and in extreme environments. Figures are included throughout to illustrate the concepts, principles and practice of POCT. Written for a broad range of practicing health professionals from the fields of medical science, health science, nursing, medicine, paramedic science, Indigenous health, public health, pharmacy, aged care and sports medicine, A Practical Guide to Global Point of Care Testing will also benefit university students studying these health related disciplines.

Mobile Computing, Applications, and Services Petros Zerfos, Rebecca Montanari, Thomas Phan, 2010-05-11 This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing Applications and Services, MobiCASE, held in San Diego, California during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity, WIMUI. MobiCASE highlights state of the art academic and industry research work in main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course, an increasingly larger user base that is moving towards an almost entirely mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia, in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.
