I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK. I am also a proud owner of an LXD75 SC 8. Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility. My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55.com website. From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them. Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before. Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage. There have been mixed reactions about its quality and performance. Hence this book is directed towards those who are new to Goto and the LXD telescope. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE JEE Modules and shows how they can be combined to a customizable GTS and used as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs and

focuses on client server programming to provide useful information It also discusses the challenges involved with the live coordination of moving cars This book is designed to aid GTS developers and engineers in the automotive industry It can also help Java Developers not only interested in GPS Tracking but in modern software design from many individual modules Source code and sample applications will be available on the book s website
