vehicle dynamic variables are known The fundamental problem is that some essential variables related to tire road friction are difficult to measure because of technical and economical reasons Therefore these data must be estimated It is against this background that this book s objective is to develop estimators in order to estimate the vehicle s load transfer the sideslip angle and the vertical and lateral tire road forces using a roll model The proposed estimation processes are based on the state observer Kalman filtering theory and the dynamic response of a vehicle instrumented with standard sensors These estimators are able to work in real time in normal and critical driving situations Performances are tested using an experimental car in real driving situations This is exactly the focus of this book providing students technicians and engineers from the automobile field with a theoretical basis and some practical algorithms useful for estimating vehicle dynamics in real time during vehicle motion **Cars** ,
