Whale For The Killing:

A Whale for the Killing Farley Mowat, 2012-04-13 A compelling true story of the author's desperate attempts to save an eighty-ton fin whale trapped in a Newfoundland lagoon. As he tries to persuade wildlife authorities and the Canadian press to help him in his quest, he must fend off curious and uncaring locals who want to harvest the helpless whale for sport. As it tells one of Mowat's most personal and moving stories, this book becomes an impassioned plea to save a species that seems doomed to extinction. A classic nature book now back in print. In the 1960s, Farley Mowat was living in the tiny fishing community of Burgeo on the southwest coast of Newfoundland. When an 80-ton fin whale became trapped in a nearby saltwater lagoon, Mowat rejoiced: here was the first chance to study at close range one of the most magnificent animals in creation. Some local villagers thought otherwise, blasting the whale with rifle fire and hacking open her back with a motorboat propeller. Mowat appealed desperately to the authorities, but it was too late: ravaged by an infection resulting from her massive wounds, the whale died. A plea for the end of commercial hunting of the whale, this moving account blends all the tension of the life-and-death struggle for one animal's survival with the drama of man's wanton destruction of life-bearing creatures and the environment itself.

A Whale for the Killing Farley Mowat, 1994 [A Whale for the Killing](#) David Seltzer, 1975 **An Analysis of A Whale for the Killing by Farley Mowat** Myrtle Carter, 1981* **Mowat's A Whale for the Killing** Catherine Finn, 1981* **Death of a Whale: The Challenge of Anti-Whaling Activists and Indigenous Rights** Captain Paul Watson, 2021-06-24 CAPTAIN PAUL WATSON IS NO STRANGER TO CONTROVERSY. But this particular conflict was more personal than most. His latest book is a fascinating and thought-provoking account of what happened when anti-whaling activists found themselves at odds with tribal rights conservationists, eco-warriors, whale protectors, and supporters of Indigenous traditions, as well as anyone who simply loves a good story. They will find themselves captivated by this tale. DEATH OF A WHALE: The Challenge of Anti-Whaling Activists and Indigenous Rights narrates the events as they unfolded. In 1998, Sea Shepherd began a campaign to protect gray whales from slaughter by members of the Makah tribe of the Pacific Northwest, who had recently invoked cultural entitlements to allow them to practice their ancestral hunting rights. Makah members, conservationists, and non-Indigenous Americans vehemently expressed disparate points of view about whether tribal whaling operations, which had ended almost a century earlier, should be recognized, even when they were not in accord with international Indigenous whaling regulations. This electrifying real-life adventure story showcases an Indigenous community at odds with itself, governments, and media that advance their own agendas, and grassroots organizers who display heroic activism. Highly detailed and documented, the book reveals Captain Watson's deep and unwavering respect for Indigenous traditions and rights, even when they conflict with his own devotion to the sovereignty of whales.

[Bowhead Whale Harvest Exemption, Deletion](#), 1977 **Whale!** Kim Leilani Evans, 2003. An entirely fresh approach to Moby Dick by way of Ludwig Wittgenstein. The aim of this thoroughly unconventional work is to demonstrate that Herman

Melville's *Moby Dick* and Ludwig Wittgenstein's *Philosophical Investigations* share the same projects and are in effect one and the same book. Confounding and improbable as such an enterprise might seem, *Whale* not only successfully reveals the vital intersections between Melville and Wittgenstein but also more importantly makes a compelling argument for why such intersections are essential to understanding common political projects in literature and philosophy. Written with grace, passion, and wit, *Whale* manages to produce a startling and remarkably original reading of one of the most written about and interpreted books in the American canon. K. L. Evans explores Melville's vast work as a tale not of vengeance but of affection and Ahab's near-pathological agitation as indicative of his refusal to accept the world as unknowable. Between Ahab and the whale, Evans traces a longing for connection and meaning and finds a forceful response to the skeptical view that language is bankrupt and knowledge is uncertain. In Ahab's hunt for Moby Dick, *Whale* discovers a way to reconnect matter with meaning, object with knowledge.

Unveiling the Whale Arne Kalland, 2009-10-01 Whaling has become one of the most controversial environmental issues. It is not that all whale species are at the brink of extinction but that whales have become important symbols to both pro and anti-whaling factions and can easily be appropriated as the common heritage of humankind. This book, the first of its kind, is therefore not about whales and whaling per se but about how people communicate about whales and whaling. It contributes to a better understanding and discussion of controversial environmental issues: Why and how are issues selected? How is knowledge on these issues produced and distributed by organizations and activists? And why do affluent countries like Japan and Norway still support whaling, which is of insignificant economic importance? Basing his analysis on fieldwork in Japan and Norway and at the International Whaling Commission, the author argues how an image of a superwhale has been constructed and how this image has replaced meat and oil as the important whale commodity. He concludes that the whaling issue provides an arena where NGOs and authorities on each side can unite, swapping political legitimacy and building personal relations that can be useful on issues where relations are less harmonious.

Fox's lifelong inquiry into values, social and personal relationships, and the treatment of animals, the environment, and each other. Fox, the popular nationally syndicated columnist of *Ask the Animal Doctor*, uses the compass of global bioethics in this book: humility, responsibility, interdisciplinary and intercultural competence, and compassion to counter technological, ecological, and value threats by pointing in the direction of a humane and sustainable society. Not intended to further the scholarly debate over what constitutes ethics, Fox brings ethics into our personal and professional lives. He shows how bioethics has immediate relevance and applicability to a wide range of public and private enterprises. Marine Mammal Conservation and the Law of the Sea Cameron S. G. Jefferies, 2016-07-12 Marine mammal conservation remains a hot button international environmental issue, but progress towards addressing key conservation and management issues within existing governance structures, most notably the International Whaling Commission, has stalled. Cameron Jefferies offers a fresh look at the future of international marine mammal management in a way that advances the ongoing dialog surrounding UNCLOS implementation and effective living marine resource management while employing the comprehensive rational decision-making model as a theoretical framework. Marine Mammal Conservation and the Law of the Sea lays out and critiques the marine mammal regulatory landscape. It introduces the rational conservation model and details the modern threats to marine mammals, including climate change, bycatch, environmental pollution, ship strikes, etc. Next, it discusses options for reform under UNCLOS and existing treaties and finally introduces a new holistic treaty regime based on the rational conservation model based in part on the UN Fish Stocks Agreement. This book will appeal to scholars, practitioners, and policymakers across public international law, international relations, political science, and environmental policy in the academic, governmental, IO, and NGO spheres.

Singing Whales and Flying Squid Richard Ellis, 2006-01-01 Two thirds of this planet is covered by water, inhabited by an incredible variety of living organisms ranging in size from microbe to whale and in abundance from scarce to uncountable. Whales and dolphins must surface to breathe, and some fishes occupy surface waters and can easily be seen from boats or shore, but most of the marine bio-profusion is hidden from human eyes, often under thousands of feet and millions of tons of water which is usually cold, dark, and utterly inhospitable to humans. By definition, the study of marine life has been quantitatively and qualitatively different from the study of terrestrial life; it is, if you will, a different kettle of fish. What do we know today, how have we learned it, and what remains unknown and unknowable about inner space? Because there have been so few human visitors to the uninviting world of the deep sea, scientists have had to rely on trawled specimens, photographs taken by robotic cameras, or occasionally observations from deep-diving submersibles to get even the vaguest idea of the nature of life in the abyss. So far, even our most elaborate efforts to penetrate the blackness have produced only minimal results. It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor and tried to

analyze the nature of life in the jungle from a couple of random hauls The inner space of the deep offers the last frontier on the planet Even now we know more about the back side of the moon than we do about the bottom of the ocean but then the surface of the moon is not hidden under miles of impenetrable water But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth An understanding of the interrelationships between various creatures including the one predator that has the power to distort damage or even eliminate populations of marine animals is necessary if we are to survive in harmony with these populations Although new technologies have given us tools to better census the whales dolphins and fishes and to see heretofore unexpected life and geological forms deep under the sea we are a long way from comprehending the nature and importance of marine biodiversity Singing Whales Flying Squid and Swimming Cucumbers is an attempt to put the search for knowledge into perspective to try to find out how we got here and where with the help of curiosity science and technology we might be headed With this as our Baedeker we will voyage through time and space tracing the history of the discovery of marine biology from the moment that the first scientists although for the most part science had barely been invented tried to figure out what sorts of creatures lived in the Mediterranean the sea right off their shores So join Richard Ellis on an underwater adventure like no other you ve ever taken or heard of a voyage to discover the mysteries and reveal the wonders of marine life more unusual and more astonishing than you or anyone else ever imagined *Whaling, Whale Oil, and Scrimshaw* United States.
