What Darwin Saw Rosalyn Schanzer,2009-01-13 In 1831 a 22 year old naturalist named Charles Darwin stepped aboard the HMS Beagle as a traveling companion of an equally youthful sea captain called Robert FitzRoy The Beagle's round the world surveying journey lasted five long years on the high seas The young Darwin noticed everything and proved himself an avid and detailed chronicler of daily events on the Beagle and onshore What Darwin Saw takes young readers back to the pages of his journals as they travel alongside Darwin and read his lively and awestruck words about the wonders of the world We follow Darwin's voyage looking over his shoulder as he explores new lands asks questions about the natural world and draws groundbreaking conclusions We walk in his footsteps collecting animals and fossils experiencing earthquakes and volcanoes and meeting people of many cultures and languages We examine his opinions on life in all its forms We consider the thoughts of this remarkable scientist who poured his observations and research into his expansive theories about life on Earth In this exciting and educational account Charles Darwin comes alive as an inspirational model for kids who think and question the world around them What Darwin Saw ,2011 **What Darwin Saw** Rosalyn Schanzer,2009 The story of Charles Darwin's voyage on the H M S Beagle told in a combination of his own words and the author's illustrations

Legend is overdue for replacement and an adequate replacement must attend to the process of science as carefully as Hull has done I share his vision of a serious account of the social and intellectual dynamics of science that will avoid both the rosy blur of Legend and the facile charms of relativism Because of Hull s deep concern with the ways in which research is actually done Science as a Process begins an important project in the study of science It is one of a distinguished series of books which Hull himself edits Philip Kitcher Nature In Science as a Process David Hull argues that the tension between cooperation and competition is exactly what makes science so successful Hull takes an unusual approach to his subject He applies the rules of evolution in nature to the evolution of science arguing that the same kinds of forces responsible for shaping the rise and demise of species also act on the development of scientific ideas Natalie Angier New York Times Book Review By far the most professional and thorough case in favour of an evolutionary philosophy of science ever to have been made It contains excellent short histories of evolutionary biology and of systematics the science of classifying living things an important and original account of modern systematic controversy a counter attack against the philosophical critics of evolutionary philosophy social psychological evidence collected by Hull himself to show that science does have the character demanded by his philosophy and a philosophical analysis of evolution which is general enough to apply to both biological and historical change Mark Ridley Times Literary Supplement Hull is primarily interested in how social interactions within the scientific community can help or hinder the process by which new theories and techniques get accepted The claim that science is a process for selecting out the best new ideas is not a new one but Hull tells us exactly how scientists go about it and he is prepared to accept that at least to some extent the social activities of the scientists promoting a new idea can affect its chances of being accepted Peter J Bowler Archives of Natural History I have been doing philosophy of science now for twenty five years and whilst I would never have claimed that I knew everything I felt that I had a really good handle on the nature of science Again and again Hull was able to show me just how incomplete my understanding was Moreover Science as a Process is one of the most compulsively readable books that I have ever encountered Michael Ruse Biology and Philosophy
