Number and Numbers Alain Badiou, 2018-05-18 The political regime of global capitalism reduces the world to an endless network of numbers within numbers but how many of us really understand what numbers are Without such an understanding how can we challenge the regime of number In Number and Numbers Alain Badiou offers an philosophically penetrating account with a powerful political subtext of the attempts that have been made over the last century to define the special status of number Badiou argues that number cannot be defined by the multiform calculative uses to which numbers are put nor is it exhausted by the various species described by number theory Drawing on the mathematical theory of surreal numbers he develops a unified theory of Number as a particular form of being an infinite expanse to which our access remains limited This understanding of Number as being harbours important philosophical truths about the structure of the world in which we live In Badiou's view only by rigorously thinking through Number can philosophy offer us some hope of breaking through the dense and apparently impenetrable capitalist fabric of

numerical relations For this will finally allow us to point to that which cannot be numbered the possibility of an event that would deliver us from our unthinking subordination of number The new thinking with numbers, book C Thomas George Foran,1954 **Thinking in numbers** Hunter Diack,1963 **The Math Gene** Keith Devlin,2001-05-17 If people are endowed with a number instinct similar to the language instinct as recent research suggests then why can t everyone do math In The Math Gene mathematician and popular writer Keith Devlin attacks both sides of this question Devlin offers a breathtakingly new theory of language development that describes how language evolved in two stages and how its main purpose was not communication Devlin goes on to show that the ability to think mathematically arose out of the same symbol manipulating ability that was so crucial to the very first emergence of true language Why then can t we do math as well as we speak The answer says Devlin is that we can and do we just don t recognize when we re using mathematical reasoning
