Vertebrate Hair Cells Springer Handbook Of Auditory Research:

Vertebrate Hair Cells Ruth Eatock, Richard R. Fay, 2006-07-01 The Springer Handbook of Auditory Research presents a series of comprehensive and synthetic reviews of the fundamental topics in modern auditory research. The volumes are aimed at all individuals with interests in hearing research including advanced graduate students, postdoctoral researchers, and clinical investigators. The volumes are intended to introduce new investigators to important aspects of hearing science and to help established investigators to better understand the fundamental theories and data in fields of hearing that they may not normally follow closely. Each volume presents a particular topic comprehensively and each serves as a synthetic overview and guide to the literature. As such, the chapters present neither exhaustive data reviews nor original research that has not yet appeared in peer-reviewed journals. The volumes focus on topics that have developed a solid data and conceptual foundation rather than on those for which a literature is only beginning to develop. New research areas will be covered on a timely basis in the series as they begin to mature.

Advances in Electrocochleography for Clinical and Basic Investigation Jeffery T. Lichtenhan, Martin Pienkowski, Oliver F. Adunka, 2018-07-09 Electrocochleography ECoChG is an approach for objective measurements of physiologic responses from the inner ear Measurements have classically been made from electrodes placed in the outer ear canal on the tympanic membrane the round window niche or inside the cochlea Recent innovations have led to ECoChG being used for exciting new purposes that drive clinical practice and contribute to the basic understanding of inner ear physiology Cochlear implant recording electrodes can monitor the preservation of residual low frequency acoustic hearing both in the operating room and post operatively ECoChG measurements can quantify differential effects of inner ear surgery or other manipulations on vestibular and auditory physiology simultaneously Various attributes of cognitive neuroscience can be addressed with ECoChG measurements from the auditory periphery These advances in ECoChG provide a way to understand a variety of inner ear diseases and are likely to be of value to many groups in their own clinical and basic research Scholarpedia of Touch Tony Prescott, Ehud Ahissar, Eugene Izhikevich, 2015-11-21 Scholarpedia s Encyclopedia of Touch provides a comprehensive collection of peer reviewed articles written by leading researchers detailing our current scientific understanding of tactile sensing and its neural substrates in animals including humans The encyclopedia allows ideas and insights to be shared between researchers working on different aspects of touch and in different species including research in synthetic touch systems In addition this encyclopedia raises awareness of research in tactile sensing and increases scientific and public interest in the field The articles address subjects including tactile control whiskered robots vibrissal coding the molecular basis of touch invertebrate mechanoreception fingertip transducers and tactile sensing All the articles in this encyclopedia provide in depth and state of the art scholarly treatment of the academic topics concerned making it an excellent reference work for academics professionals and students **Auditory Development and Plasticity** Karina S. Cramer, Allison B. Coffin, Richard R. Fay, Arthur N. Popper, 2017-10-14 This volume presents a set of essays that discuss the development and plasticity of the vertebrate auditory system The topic is one that has been considered before in the Springer Handbook of Auditory Research volume 9 in 1998 and volume 23 in 2004 but the field has grown substantially and it is appropriate to bring previous material up to date to reflect the wealth of new data and to raise some entirely new topics At the same time this volume is also unique in that it is the outgrowth of a symposium honoring two time SHAR co editor Professor Edwin W Rubel on his retirement The focus of this volume though is an integrated set of papers that reflect the immense contributions that Dr Rubel has made to the field over his career Thus the volume concurrently presents a topic that is timely for SHAR but which also honors the pioneer in the field Each chapter explores development with consideration of plasticity and how it becomes limited over time The editors have selected authors with professional and often personal

connections to Dr Rubel though all are in their own rights outstanding scholars and leaders in their fields The specific audience will be graduate students postdoctoral fellows and established psychologists and neuroscientists who are interested in auditory function development and plasticity This volume will also be of interest to hearing scientists and to the broad neuroscience community because many of the ideas and principles associate with the auditory system are applicable to most sensory systems The volume is organized to appeal to psychophysicists neurophysiologists anatomists and systems neuroscientists who attend meetings such as those held by the Association for Research in Otolaryngology the Acoustical Society of America and the Society for Neuroscience
