All life is made from CO₂ and its behavior on this planet has kept it bizarrely habitable for hundreds of millions of years. In its workings lie both the splendor of our world and the potential for life's destruction. In short, it is the most important substance in Earth's history. But why is CO₂ as essential to life on Earth as it is capable of destroying it? In *THE STORY OF CO₂ IS THE STORY OF EVERYTHING*, award-winning science journalist Peter Brannen reveals carbon dioxide's fundamental role in the operation and maintenance of Planet Earth. Starting at the beginning of time and working all the way up to our present reality, he illuminates how CO₂ has been responsible for the planet's many deaths and rebirths for the evolution of life and for the development of modern human society. Carbon dioxide's movement through the rocks, the air, the oceans, and life has kept our planet's climate livable, its air breathable, and its oceans hospitable to complex life for more than 500 million years. And only by understanding CO₂ in the context of deep Earth history can we see how it gave rise to today's industrial economy and more clearly recognize what it means to be churning through hundreds of millions of years of old life in the form of fossil fuels and converting it all to carbon dioxide. With groundbreaking research and a clear-eyed perspective, Brannen shows how a deep exploration into the mechanics of the carbon cycle and the history of our planet can provide hope for averting environmental catastrophe in the future. It all starts with a richer understanding of the essential role of one substance.

physics motion numerical solved and worksheet for class 9 - Sep 03 2023

web solution initial velocity $u = 6.0 \text{ m/s}$ final velocity $v = 4.4 \text{ m/s}$ because direction of ball has become opposite time $t = 0.04 \text{ s}$ thus acceleration $a = \frac{v - u}{t} = \frac{4.4 - 6.0}{0.04} = -40 \text{ m/s}^2$ after multiplying -40 by 100 to make calculations simpler we get -4000 m/s^2
