Laboratory Guide to Vertebrate Dissection for Students of Anatomy Arthur Beeny Appleton, 1929. As its title indicates, this is a book for use in a practical comparative anatomy course. It is intended for a somewhat unusual class of student and consequently its contents, outlook, and method of treatment are unlike those of the standard texts in this subject. As stated in the preface, it is assumed that the student has already done a course in elementary zoology, including the usual vertebrate types, and has also examined in more detail a mammal. Unless this mammal were man, a number of comparisons in the book would be missed. To obtain full benefit from it, the student should obviously have taken the preliminary medical studies, including a fair amount of human anatomy. This is not meant to imply that the student of advanced zoology cannot get many useful hints and fresh points of view from its pages; he undoubtedly can. The types treated in a series of regional dissections are the lamprey, the dogfish, *Squalus Necturus*, the lizard, and the dog.

As it is intended for assistance in dissection information regarding osteology and the details of the central nervous system have been purposely omitted and conversely the muscles are treated somewhat more fully than is customary The Dissection of Vertebrates Gerardo De Iuliis,Dino Pulerà,2006-08-03 The Dissection of Vertebrates covers several vertebrates commonly used in providing a transitional sequence in morphology With illustrations on seven vertebrates lamprey shark perch mudpuppy frog cat pigeon this is the first book of its kind to include high quality digitally rendered illustrations This book received the Award of Excellence in an Illustrated Medical Book from the Association of Medical Illustrators It is organized by individual organism to facilitate classroom presentation This illustrated full color primary dissection manual is ideal for use by students or practitioners working with vertebrate anatomy This book is also recommended for researchers in vertebrate and functional morphology and comparative anatomy The result of this exceptional work offers the most comprehensive treatment than has ever before been available Received the Award of Excellence in an Illustrated Medical Book from the Association of Medical Illustrators Expertly rendered award winning illustrations accompany the detailed clear dissection direction Organized by individual organism to facilitate classroom presentation Offers coverage of a wide range of vertebrates Full color strong pedagogical aids in a convenient lay flat presentation **The Dissection of Vertebrates** Gerardo De Iuliis,Dino Pulerà,2006-08-03 The Dissection of Vertebrates Second Edition provides students with a manual that combines pedagogical effective text with high quality accurate and attractive visual references Using a systemic approach within a systematic framework for each vertebrate this book covers several animals commonly used in providing an anatomical transition sequence Seven animals are covered lamprey shark perch mudpuppy frog pigeon and cat This updated version include a revised systemic section of the introductory chapter corrections to several parts of the existing text and images new comparative skull sections included as part of the existing vertebrates and a companion site with image bank This text is designed for 2nd or 3rd year university level comparative vertebrate anatomy courses Such courses are usually two semester courses and may either be a required course or an elective It is typically a required course for Biology and Zoology majors as well as for some Forensics and Criminology programs and offered as an elective for many other non zoology science majors Winner of the NYSM Jury award for the Rock Dove Air Sacs Lateral and Ventral Views illustration Expertly rendered award winning illustrations accompany the detailed clear dissection direction Organized by individual organism to facilitate classroom presentation Offers coverage of a wide range of vertebrates Full color strong pedagogical aids in a convenient lay flat presentation Expanded and updated features on phylogenic coverage mudpuppy musculature and comparative mammalian skulls *Laboratory Guide to Vertebrate Dissection for Students* Appleton,1929
