Vexing Nature On The Ethical Case Against Agricultural Biotechnology:

Vexing Nature? Gary L. Comstock, 2012-12-06 Agricultural biotechnology refers to a diverse set of industrial techniques used to produce genetically modified foods. Genetically modified GM foods are foods manipulated at the molecular level to enhance their value to farmers and consumers. This book is a collection of essays on the ethical dimensions of ag biotech. The essays were written over a dozen years beginning in 1988. When I began to reflect on the subject, ag biotech was an exotic, untested technology. Today, in the first year of the millenium, the vast majority of consumers in the United States have taken a bite of the apple. Milk produced by cows injected with a GM protein called recombinant bovine growth hormone (bGH) is found unlabelled on grocery shelves throughout the US. In 1999, half of the soybeans and cotton harvested in the US were GM varieties. Billions of dollars of public and private monies are being invested annually in biotech research and commercial sales now reach into the tens of billions of dollars each year. I Whereas ag biotech once promised to change American agriculture, it now is in the process of doing so.

Food Biotechnology David B. Archer, 2008-08-28 This resource examines trends in modern biotechnology covering all aspects of this interdisciplinary field. Encyclopedia of Religion and Nature Bron

Taylor, Jeffrey Kaplan, 2005-01-01 No Marketing Blurb **Acceptable Genes?** Conrad G. Brunk, Harold Coward, 2009-10-30 Modern biotechnology has surpassed science fiction with such feats as putting fish genes in tomatoes to create a more cold resistant crop. While the environmental and health concerns over such genetically modified foods have been the subject of public debate, religious and spiritual viewpoints have been given short shrift. This book seeks to understand the moral and religious attitudes of groups within pluralistic societies whose traditions and beliefs raise for them unique questions about food and dietary practice. What questions are there for kosher Jews, halal Muslims, and vegetarian Hindus about food products containing transgenes from prohibited sources? How do these foods impact the cultural practices and spiritual teachings of indigenous peoples? Concerns from the above traditions as well as Christianity, Buddhism, Chinese religion, and ethical vegetarianism are included. Contributors look at the ethical context of each tradition and also include information from focus groups. This enlightening work concludes with recommendations for the labeling of genetically modified foods.

Agriculture's Ethical Horizon Robert L. Zimdahl, 2012-01-30 The second edition of *Agriculture's Ethical Horizon* is a carefully considered application of philosophical concepts such as utilitarianism and positivism to the practice of agricultural science. Author Robert Zimdahl argues for an approach to agriculture guided by foundational values and addresses the questions: What are the goals of agricultural and weed science? What should their goals be? How do and how should the practitioners of agriculture address complex ethical questions? This book engages students, researchers, and professionals across disciplines including horticulture, soil and plant science, entomology, and more, all without requiring a background in philosophy. It examines topics such as scientific truth and myth, moral confidence in agriculture, the relevance of ethics to sustainability, and biotechnology. New to this edition is a chapter examining the raising, housing, and slaughter of animals for

human food and a chapter on alternative and organic agricultural systems Easily understood by non philosophers Chapter sidebars highlight important concepts and can be used to engage students in further discussion Companion website includes further teaching aids and a discussion board

Ethical and Political Approaches to Nonhuman Animal Issues Andrew Woodhall, Gabriel Garmendia da Trindade, 2017-08-28 This book offers ethical and political approaches to issues that nonhuman animals face The recent political turn in interspecies ethics from ethical to political approaches has arisen due to the apparent lack of success of the nonhuman animal movement and dissatisfaction with traditional approaches Current works largely present general positions rather than address specific issues and principally rely on mainstream approaches This book offers alternative positions such as cosmopolitan libertarian and left humanist thought as well as applying ethical and political thought to specific issues such as experimentation factory farming nonhuman political agency and intervention Presenting work by theorists and activists insights are offered from both ethics and politics that impact theory and practice and offer essential considerations for those engaging in interspecies ethics within the political turn era

EU Policy-Making on GMOs Mihalís Kritikós, 2017-11-02 This book examines the development and implementation of the EU's legislative framework on the commercial release of GMO products as a case study of social regulation operating within a predominantly technical framework The analysis and findings are based on an extensive documentary analysis and interviews with regulators risk assessors public interest groups and biotechnology experts at the national and European levels It argues that in the case of the EU biotechnology framework the particular institutional settings created for the formulation and interpretation of its provisions have been of decisive importance in elaborating a proceduralised science based prior authorization scheme as the preferred framework for granting commercial permits This interdisciplinary work will appeal to EU lawyers decision makers and risk managers as well as academics working in the fields of EU studies politics law risk governance sociology of science risk and technology assessment The book is based on a PhD thesis that was awarded with the 2008 UACES Prize for the Best Thesis in European Studies in Europe and with the EPEES 1st Prize for the Best Thesis written by a Greek Researcher between 2004 and 2008

Food and Agricultural Biotechnology in Ethical Perspective Paul B. Thompson, 2020-11-09 This 3rd edition of Food and Agricultural Biotechnology in Ethical Perspective updates Thompson's analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as Food Biotechnology in Ethical Perspective in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property

debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised

Food Ethics: The Basics Ronald L. Sandler, 2014-10-17 Food Ethics The Basics is a concise yet comprehensive introduction to the ethical dimensions of the production and consumption of food It offers an impartial exploration of the most prominent ethical questions relating to food and agriculture including Should we eat animals Are locally produced foods ethically superior to globally sourced foods Do people in affluent nations have a responsibility to help reduce global hunger Should we embrace bioengineered foods What should be the role of government in promoting food safety and public health Using extensive data and real world examples as well as providing suggestions for further reading Food Ethics The Basics is an ideal introduction for anyone interested in the ethics of food

The Eucharist and World Hunger Izunna Okonkwo, 2011-12-21 Hunger is a menace in different parts of the globe It has more unnatural than natural causes Though efforts have been made towards alleviating its causes and consequences more actions still need to be taken for its genuine alleviation and eventual eradication in the world For Joseph Grassi painful hunger is a daily occurrence that must be countered by ongoing effective programs that enter into the lives of every Christian Such position not only recognises the frequency and excruciating nature of hunger but also suggests that Christians and other religious groups have a very important role to play in order to eradicate hunger and its devastating effects This book explores the nuances of hunger its causes dimensions and approaches as well as its connection to the Eucharist It argues that hunger can be eradicated and that the Eucharist stands out as a veritable model
