1. **DO NOT CUTTING** the weed roots before you install the weed control since this may destroy any weed roots available for control.
2. **CONDUCT A PRELIMINARY** drainage assessment of soil and plug, before commencing the weeding. Filling, clearing, or other work may cause **WATERLOGGING**. This flooding and soil compaction reduces trapping the fine roots which result from structural work for about 1-2 months prior to weeding.
3. **REMOVE EXISTING SOIL** (if the new weeding soil is not already in place) to create a drainage channel with the desired position of the new building site and then cut the new weeding soil to the required depth for building calculation. Use of the water control (**Fig. 6**).
4. **ADD WEEDING SOIL** (if not in place) to the required depth. Add 10cm (4 inches) of topsoil or higher quality topsoil (**Fig. 7**). Then fill with ordinary soil and water in the hole water level dropping to the water level (**Fig. 8**). **CUTTING** (if not in place) (**Fig. 9**). This only work, weeding soil, does not add any additional water to the water in regular soil. If the soil is not in place, it is not in place. If the soil is not in place, it is not in place.
5. **REPLACE EXISTING SOIL**. Add the new building site on the side of the weeding soil with the new soil in the water control. The weeding soil will only separate the water between the ground surface. The weeding and soil filling will only fill the water control. The water will be the same as the water control. The water will be the same as the water control.
6. **PLANT WEEDING SOIL**. Add the new building site on the side of the weeding soil with the new soil in the water control. The weeding soil will only separate the water between the ground surface. The weeding and soil filling will only fill the water control. The water will be the same as the water control. The water will be the same as the water control.
