What Is Life The Intellectual Pertinence Of Erwin Schrödinger:

What is Life? Hans Ulrich Gumbrecht, Robert B. Laughlin, 2011 In this volume four leading American scientists and humanists unfold the controversial potential of Schrödinger's thought

Invitation To Generalized Empirical Method: In Philosophy And Science Terrance J Quinn, 2016-12-28 Bernard Lonergan identified the need and possibility of what he called generalized empirical method in science and philosophy Implementation will be a future community achievement The book enters into details of a selection of examples in the sciences and philosophy of science These are provided not to engage in or blend the present aim with traditional philosophical debate but as points of entry to help reveal the possibility and need of balanced empirical method Taking words of Lonergan Questions of method are practical So my purpose in these chapters is not to demonstrate what is necessary It is not to forecast what is probable It is to invite you to share in the exploration of a proposal Bernard Lonergan A Third Collection 1985 114 The main examples are drawn from biochemistry and biology although heuristics envisioned will include all sciences

The Rigor of Angels William Egginton, 2025-03-04 A NEW YORK TIMES AND NEW YORKER BEST BOOK OF THE YEAR A poet a physicist and a philosopher explored the greatest enigmas in the universe the nature of free will the strange fabric of the cosmos the true limits of the mind and each in their own way uncovered a revelatory truth about our place in the world A mind expanding book Elegantly written The New York Times A remarkable synthesis of the thoughts ideas and discoveries of three of the greatest minds that our species has produced John Banville The Wall Street Journal Argentine poet Jorge Luis Borges was madly in love when his life was shattered by painful heartbreak But the breakdown that followed illuminated an incontrovertible truth that love is necessarily imbued with loss that the one doesn't exist without the other German physicist Werner Heisenberg was fighting with the scientific establishment on the meaning of the quantum realm's absurdity when he had his own epiphany that there is no such thing as a complete perfect description of reality Prussian philosopher Immanuel Kant pushed the assumptions of human reason to their mind bending conclusions but emerged with an idea that crowned a towering philosophical system that the human mind has fundamental limits and those limits undergird both our greatest achievements as well as our missteps Through fiction science and philosophy the work of these three thinkers coalesced around the powerful haunting fact that there is an irreconcilable difference between reality out there and reality as we experience it Out of this profound truth comes a multitude of galvanizing ideas the notion of selfhood free will and purpose in human life the roots of morality aesthetics and reason and the origins and nature of the cosmos itself As each of these thinkers shows every one of us has a fundamentally incomplete picture of the world But this is to be expected Only as mortal finite beings are we able to experience the world in all its richness and breathtaking majesty We are stranded in a gulf of vast extremes between the astronomical and the quantum an abyss of freedom and absolute determinism and it is in that center where we must make our home A soaring and lucid reflection on the lives and work of Borges Heisenberg and Kant *The Rigor of Angels* movingly demonstrates that the

mysteries of our place in the world may always loom over us not as a threat but as a reminder of our humble humanity

Science, Technology, and Irish Modernism Kathryn Conrad, C  il  n Parsons, Julie McCormick Weng, 2019-09-13 Since W B Yeats wrote in 1890 that the man of science is too often a person who has exchanged his soul for a formula the anti scientific bent of Irish literature has often been taken as a given Science Technology and Irish Modernism brings together leading and emerging scholars of Irish modernism to challenge the stereotype that Irish literature has been unconcerned with scientific and technological change The collection spotlights authors ranging from James Joyce Elizabeth Bowen Flann O'Brien and Samuel Beckett to less studied writers like Emily Lawless John Eglinton Denis Johnston and Lennox Robinson With chapters on naturalism futurism dynamite gramophones uncertainty astronomy automobiles and more this book showcases the far reaching scope and complexity of Irish writers engagement with innovations in science and technology Taken together the fifteen original essays in Science Technology and Irish Modernism map a new literary landscape of Ireland in the twentieth century By focusing on writers often ignored interest in science and technology this book uncovers shared concerns between revivalists modernists and late modernists that challenge us to rethink how we categorize and periodize Irish literature

Re-framing Regional Development Philip Cooke, 2013-01-17 Turbulence characterises the current global scene This book uses complementary theoretical approaches to understand and help prescribe policies to re frame the regional development problem in turbulent times These approaches are evolutionary complexity evolutionary economic geography emergence theory and resilience theory From below they address the four major crises creating a perfect storm for societies and economics involving the climate change crisis the energy crisis the banking and financial crisis and the global economic crisis This book analyses and proposes ways in which regional economies in particular are having to be reframed to address these crises First many must evolve in new ways possibly moving back from the service economy towards a new greener form of manufacturing of goods as well as services Accordingly regional economies are innovating in new ways Amongst these are the quest for relatedness within their own regional orbits and promoting modularity as a mode of analysis and a policy stance to stimulate innovation across industry and geographical borders Finally regional economies and societies are discovering that from a resilience perspective they must find answers to the higher levels of governance with which they increasingly struggle In this respect regional economies are in transition and regional processes are emergent The transition seeks to address the four crises involving re balancing re directing and re framing future policy and practice This book describes many of the novel framings involved in understanding the new ways in which this major task is being addressed in theory policy and everyday practice

Evolution Somnath Bhattacharyya, 2023-09-29 This book reconceptualizes the ancient philosophy of dualism and a trinity applied to classical and quantum nonequilibrium phenomena In addition to classical mechanics and electrodynamics a remarkable connection of this philosophy with quantum mechanics is established which can be useful for quantum computing and the development of quantum artificial intelligence Packed with the recent

theoretical models quantum simulations of black holes and experimental observations of quantum phase transitions this book brings a holistic approach that can be useful to refine the concept of the Creation i e the evolution of the Universe from the condensed state of matter and explain the artificial vision The approach is Unique Connects ancient philosophy classical and quantum mechanics materials and the latest quantum technologies Novelty High level of scientific interpretation of ancient philosophy creation interactions and disorder Multidisciplinary Guides students to learn quantum simulations and develop philosophical ideas The book contains over ten years of in depth research by the author on the ancient eastern Indian philosophy and the latest scientific research in condensed matter and quantum technology This book will simplify the picture of ancient eastern philosophy which can be read by the general audience particularly undergraduate postgraduate students interested in quantum information science without any mathematical treatment However some parts of the book will be ideal for senior academicians and professional researchers in both worlds

What is Life? Erwin Schrödinger, 2012-03-26 What Is Life is Nobel laureate Erwin Schrödinger's exploration of the question which lies at the heart of biology His essay *Mind and Matter* investigates what place consciousness occupies in the evolution of life and what part the state of development of the human mind plays in moral questions *Autobiographical Sketches* offers a fascinating fragmentary account of his life as a background to his scientific writings

What is Life? Josef Seifert, 1997 This book makes four bold claims 1 life is an ultimate datum open to philosophical analysis and irreducible to physical reality hence all materialist reductionist explanations most current theories of life are false 2 All life presupposes soul entelechy without which a being would at best fake life 3 The concept of life is analogous and the most direct access to life in its irreducibility is gained through consciousness 4 All life possesses an objective and intrinsic value that needs to be respected human life possesses beyond this an inviolable dignity Life and personal life are pure perfections it being absolutely better to possess personal life than not to possess it Chapter 1 the metaphysical essence and the many meanings of life as well as its transcendental character Chapter 2 the irreducibility of biological life its amazing empirical and philosophically intelligible essential features and the ways of knowing them Chapter 3 the immediate evidence and indubitable givenness of mental conscious life as well as questions of brain death and immortality Chapter 4 the inviolable objective dignity of personal life and its self transcendence a new theory of the fourfold source of human dignity and rights Chapter 5 in dialogue form methods and results of philosophy versus those of empirical life sciences

Mind and matter Erwin Schrödinger, 1967

What Is Life? Katrin Klingan, Stefan Helmreich, Natasha Myers, Sophia Roosth, Michael Rossi, Nick Houde, 2022-02-15 What Is Life is a question that has haunted the life sciences since Gottfried Treviranus and Jean Baptiste Lamarck independently
