Abstract-WiMAX (world wide interoperability for microwave access) is a potential backhaul technology for the fourth generation (4G) of wireless networks. 4G provides high speed, high capacity, low cost per bit, IP based services for video data and voice (VoIP). The development of new technology should allow bridging of functions like broadband data access and VoIP. This paper will evaluate the potential of WiMAX as 4G technology; provide comparison between existing wireless technology (Wi-Fi) and WiMAX. Furthermore it presents the future applications of the latter.

I. INTRODUCTION

WiMAX is a telecommunication protocol that provides fixed and mobile internet access. WiMAX forum describes WiMAX as "a standards-based technology enabling the delivery of last mile wireless broadband access as an alternative to cable and DSL. WiMAX refers to the interoperable implementations of IEEE 802.16 standard, whereas Wi-Fi refers to the implementations of 802.11 standards. The further two subdivisions of the WiMAX standards are 802.16d which is for fixed WiMAX and 802.16e for mobile WiMAX.

WiMAX provides an ample amount of opportunity to interconnect devices within an entire geographical area. This provides a mechanism of interconnecting devices in a large area, thereby making the devices smarter and increases the efficiency with which devices in a network communicate with each other. This finds particular application in vehicular collision prevention and hospitals in bio telemetry system, the details of which have been presented in the later sections. In short, WiMAX enables on the go connection to a metropolitan network. There is a lesser probability for disconnection, as in WiMAX each user is allocated a slot of the bandwidth which will not be shared by the other users, as a result of which each user gets a constant data rate without disruption. Several market players in India have started recognizing WiMAX as the perfect technology for the speedy roll-out of mobile internet access.

The rest of the paper is organized as follows: section II will present an overview of the wireless evolution. Section III describes the characteristics of WiMAX technologies. Section IV presents a comparison between Wi-Fi and WiMAX. Section V will elucidate on future applications of this technology.
