Science, Religion, the Humanities and Hope Anne Runehov, Michael Fuller, 2024-03-19 This book collects a multidisciplinary range of contributions focusing on the prolific and seminal work of Willem Drees in the fields of philosophy of religion philosophy of the humanities and science and theology religion Trained in both theoretical physics and theology philosophy of religion Drees holds doctoral degrees in both theology and in philosophy and amongst other distinguished positions held professorships at the University of Leiden and at the University of Tilburg Drees was also Editor in Chief of Zygon Journal of Religion Science between 2008 and 2018 and served as President of the European Society for the Study of Science and Theology ESSSAT between 2002 and 2008 In 2018 he was elected as member of the Royal Holland Society of Sciences and Humanities KHMW This contributed volume builds on Drees expansive and provocative scholarly contributions notably around the concept and meaning of naturalism and the humanities to the fields of science and religion as exemplified by his works Religion Science and Naturalism 1996 and What Are the Humanities For 2021 In a time where more and more young people across the globe are entering higher education such cross disciplinary explorations and re evaluations are vital to the field Accordingly by approaching his work from a variety of disciplines this collection illuminates the broad reach of Drees work and provides scholars from various fields with many new and rich opportunities avenues for research Paul Ricoeur Frans D. Vansina, 2000 Already more than sixty years Paul Ricoeur enriches the international philosophical patrimony with an astonishing number of highly technical books and enlightening reflections on actual problems and situations To serve the community of researchers in philosophy I have already published two systematic bibliographies of and on Ricoeur in 1985 and 1995 Encouraged by friends and colleagues I present now another updated bibliography as exhaustive as possible

Worldviews, Science And Us: Redemarcating Knowledge And Its Social And Ethical Implications Diederik Aerts, Nicole Note, Bart D'hooghe, 2005-07-18 This publication features an interdisciplinary group of contributors which questions aspects of today's worldviews and science that are often taken for granted and tacitly determine the boundaries of what is generally conceived of as the world and science Some authors stress that existing demarcations are obsolete and often prevent new insights Others show how they influence the way people perceive themselves and believe the world ontologically to be determining people's actions and the social fabric There are yet others who point out how a redemarcation may stimulate the development of knowledge acquisition and social well being Examples of how bridging knowledge between different fields leads to new crucial insights while identifying the pattern of too strict a demarcation preventing such insights are also analyzed in this volume **Citizenship in Organizations** Suzan Langenberg, Fleur Beyers, 2017-08-10 This book explores the concept of citizenship and the role that organizations can or do play in its creation stimulation and control Offering multiple organizational perspectives private and public organisations and their relation to several types of output citizenship poverty profit employability this work presents a rich collection of philosophical thoughts and practices on the subject of

citizenship within and without the organizational context Particular attention is given to this human aspect an element of unpredictability a gut feeling the unknown something immeasurable that plays a part in human relations and how they organize themselves Citizenship in Organizations casts new light on the impact of organizations to the notion of citizenship

The Language of Science Ilse N. Bulhof, 1992-09-01 The existence of a separation between science and literature has long been taken for granted This study shows that in science language functions in very much the same way as in literature it is rhetorical in that it persuades readers to the author's point of view and it is poetical in that with its metaphors and other figures of speech it shapes the experience of author and reader The separation between science and literature proves to be untenable This has important ontological implications science can no longer be considered an action performed by a speaking subject on a mute object Does the creative role of language in science mean that human beings create the world The author emphatically rejects a conclusion which would degrade nature to mere malleable material at the mercy of human beings A hermeneutical model for the relationship between knower and known is suggested creative interaction between reader and text The reader's responses actualise a text's meaning in like manner scientists give their responses to reality by actualising one of many possibilities The hermeneutical ontology proposed in this book steers away from the rocks of realism and anti realism
