Wind Stress Over The Ocean:

Wind Stress Over the Ocean Ian S. F. Jones, Yoshiaki Toba, 2001-09-24 Understanding wind stress drag over the ocean is central to many facets of air sea interaction which in turn is vital for models of weather prediction and climate modelling Wind Stress over the Ocean first published in 2001 brings together thirty of the world's leading experts in air sea interaction under the auspices of the Scientific Committee on Oceanic Research Wind Stress over the Ocean provides a thorough re-examination of the physical processes that transfer momentum between the atmosphere and the ocean As well as describing the established fundamentals the book also explores active areas of research and controversy The book will form a comprehensive guide and reference for researchers and graduate students in physical oceanography meteorology fluid dynamics and coastal engineering *The Mean Wind Stress Over the Atlantic Ocean* John Douglas Cochran, Palmer Osborn, 1950 **The Field of Mean Wind Stress Over the North Pacific Ocean** J. F. T. Saur, John Douglas Cochran, Scripps Institution of Oceanography, 1948* **Scientific Opportunities Using Satellite Surface Wind Stress Measurements Over the Ocean** Satellite Surface Stress Working Group, 1982 *Wind Stress Over the Open Ocean* Margaret J. Yelland, 1997 A New Analysis of Monthly Mean Wind Stress Over the Global Ocean Y.-J. Han, S.-W. Lee, 1981 *Satellite Altimetry Over Oceans and Land Surfaces* Detlef Stammer, Anny Cazenave, 2017-10-31 Satellite remote sensing in particular by radar altimetry is a crucial technique for observations of the ocean surface and of many aspects of land surfaces and of paramount importance for climate and environmental studies This book provides a state of the art overview of the satellite altimetry techniques and related missions and reviews the most up to date applications to ocean dynamics and sea level It also discusses related space based observations of the ocean surface and of the marine geoid as well as applications of satellite altimetry to the cryosphere and land surface waters operational oceanography and its applications to navigation fishing and defense **Scientific opportunities using satellite surface wind stress measurements over the ocean**, 1982 *The Mean Wind Stress Over the Atlantic Ocean*, by J D Cochran and P Osborn. Oceanographic Report No. 21, 1950 Wind Stress on the Ocean Over the Eastern Continental Shelf of North America Peter M. Saunders, Woods Hole Oceanographic Institution, 1978 Scientific Opportunities Using Satellite Surface Wind Stress Measurements Over the Ocean, 1982 Scientific opportunities that would be possible with the ability to collect wind data from space are highlighted Minimum requirements for the space platform and ground data reduction system are assessed The operational uses that may develop in government and commercial applications of these data are reviewed The opportunity to predict the large scale ocean anomaly called El Nino is highlighted *Wind Stress in the Open Ocean* P. Taylor, 1996 Air-Sea Interaction and Oceanic Extremes Lichuan Wu, Jinbao Song, Victor Alari, Leonie Esters, 2024-12-24 Air sea interactions control the exchange of mass momentum and heat between the atmosphere and the ocean Substantially they significantly affect the development of atmospheric and oceanic systems from submesoscale to global scales Oceanic extremes i.e cyclones storms

freak waves polar lows storm surge etc pose a significant hazard to offshore activities and coastal society Air sea interaction processes are complex and play a central role in the development of those oceanic extremes Improved understanding of the air sea interaction processes and describing them in weather models and Earth System Models can improve their prediction and mitigate the potential damages The energy distribution affected by air sea interactions can change the large scale circulation and alter the climatology of the oceanic extremes Despite an overall improvement in the understanding of air sea interactions there are still many knowledge gaps particularly under extreme conditions

Oceans '89: Fisheries, global ocean studies, marine policy & education, oceanographic studies, 1989 *Oceanic Wind Speed and Wind Stress Estimation from Ambient Noise Measurements* Ping-Tung Shaw, D. Randolph Watts, H. Thomas Rossby, RHODE ISLAND UNIV KINGSTON GRADUATE SCHOOL OF OCEANOGRAPHY., University of Rhode Island. Graduate School of Oceanography, 1977 From ship records of wind speed and 5 kHz acoustic ambient noise measured on ocean bottom instruments during Mid Ocean Dynamics Experiment MODE I it was found that noise records may be used to monitor wind speed and wind stress over the ocean Time series of wind speeds can be produced from noise measurements via the linear relationship found between the noise spectrum level and the logarithm of the wind speed By independently determining wind direction the wind stress has also been estimated and vector averaged The monthly mean stress from the authors data is higher than values computed from mean wind speeds or from probability distributions of wind speeds in climatological records Power spectra of these wind speed records decrease smoothly with increasing frequency for periods between 2 to 50 hours Noise pressure records exhibited significant coherence between pairs of localities 100 to 200 km apart during the spring as organized weather fronts passed through the region

Ocean Current and Wave Effects on Wind Stress Drag Coefficient Over the Global Ocean, 2007 The effects of ocean surface currents and dominant waves on the wind stress drag coefficient C_0 are examined over the global ocean Major findings are as follows 2 the combination of both ocean wave and current speeds can result in reductions in daily C_0 10% but the notable impact of the latter is only evident in the tropical Pacific Ocean 2 the presence of waves generally makes winds weaker and C_0 lower almost everywhere over the global ocean 3 strong ocean currents near the western boundaries Kuroshio and Gulf Stream do not substantially influence C_0 since the winds and currents are not always aligned and 4 the change in speed used in bulk flux parameterization also causes large changes in fluxes Globally the combined outcome of ocean currents and waves is to reduce C_0 by about 2% but spatial variations 0% to 14% do exist

Variability of the Surface Wind and Ocean Circulation Over the Northern California Shelf Amelito Gomez Enriquez, 1994 *NOAA Technical Report NMFS SSRF.*, 1977 Report of the Ad Hoc Committee on Surface Wind and Wind Stress Fields; Prepared for TOGA-U.S. Project Office, 1984 **The Trade Wind Field Over the Pacific Ocean** Klaus Wyrtki, Gary Meyers, 1975
