Wine Analysis And Production:

Wine Analysis and Production Bruce Zoecklein, Kenneth C. Fugelsang, Barry H. Gump, Fred S. Nury, 1995-12-31 This accessible volume provides practical information on wine analysis and production. It covers the full range of techniques from quick screening assays to wet chemical and instrumentation analysis as well as interpretation of results. Emphasizing a step by step approach to procedures, the authors examine analyses commonly performed in the United States, Europe, and Australia, discuss viticultural considerations as they relate to winemaking, as well as sensory evaluation and the importance of each analyte in the spectrum of winery operations. Present new procedures including quick qualitative tests for the presence of various constituents, explore updated information on sensory evaluation of wines, use of enzymes in winemaking, health aspects, and more, and offer a chapter featuring laboratory procedures listed alphabetically and extensively cross referenced. International in scope, *Wine Analysis and Production* is essential for winemakers and laboratory personnel worldwide. Students of enology will find it an incomparable resource.

Wine Analysis and Production Bruce W. Zoecklein, 1995. Winemaking as a form of food preservation is as old as civilization. Wine has been an integral component of people's daily diet since its discovery and has also played an important role in the development of society, religion, and culture. We are currently drinking the best wines ever produced. We are able to do this because of our increased understanding of grape growing, biochemistry, and microbiology of fermentation, our use of advanced technology in production, and our ability to measure the various major and minor components that comprise this fascinating beverage. Historically, winemakers succeeded with slow but gradual improvements brought about by combinations of folklore, observation, and luck. However, they also had monumental failures resulting in the necessity to dispose of wine or convert it into distilled spirits or vinegar. It was assumed that even the most marginally drinkable wines could be marketed. This is not the case for modern producers. The costs of grapes, the technology used in production, oak barrels, corks, bottling equipment, etc., have increased dramatically and continue to rise. Consumers are now accustomed to supplies of inexpensive and high quality varieties and blends; they continue to demand better. Modern winemakers now rely on basic science and the systematic application of their art to produce products pleasing to the increasingly knowledgeable consumer base that enjoys wine as part of its civilized society.

Production Wine Analysis Bruce W. Zoecklein, 2012-12-06. This text is designed to acquaint the reader with the commonly used procedures of juice and wine analysis as they are generally practiced in the industry and as they are taught in the Department of Enology at California State University, Fresno. It is assumed that the reader has a basic preparation in the fields of chemistry and microbiology. In developing material for this text, the authors have emphasized analyses as they would be carried out in a production laboratory. Realizing that different laboratories have different analytical capabilities, personnel, as well as equipment, we have in many instances provided several different approaches to the same analysis. Throughout this book, we have attempted to give special attention to

practical considerations and the importance of these analyses in the total spectrum of winery operations We hope the book s format will satisfy the inter ests of laboratory personnel as well as winemakers The process of making wine involves a series of concerns for the winemaker and staff of a winery The first concerns are viticultural Upon arrival of the fruit its quality is assessed grapes are processed and fermentation is begun Almost immediately and in many instances simultaneously chemical and microbiological stability of the young and or aging wine become important Finally problems do occur on occasion and a number of what may be considered remedial techniques can be employed to produce an acceptable product
