Long-Term Therapies Gérard Reach, 2015-01-06 How can we accept that we ought to stop smoking follow a diet exercise or take medications The goal of this book is to describe the mechanisms of patients adherence to long term therapies whose improvement according to the World Health Organization WHO would be more beneficial than any biomedical progress For example approximately half of the patients do not regularly follow medical prescriptions resulting in deleterious effects on people s health and a strong impact on health expenditure This book describes how our beliefs desires and emotions intervene in our choices concerning our health by referring to concepts developed within the framework of the philosophy of mind In particular it tries to explain how we can choose between an immediate pleasure and a remote reward preserving our health and our life We postulate that such an intertemporal choice can be directed by a principle of foresight which leads us to give priority to the future Just like patients non adherence to prescribed medications doctors often don t always do what they should They are non adherent to good practice guidelines We propose that what was recently de scribed as clinical inertia could also represent a case of myopia From time to time doctors fail to consider the long term interests of their patient Both patients non adherence and doctors clinical inertia represent major barriers to the efficiency of care However it is also necessary to respect patients autonomy The analysis of relationship between mind and care which is provided in this book sheds new light on the nature of the therapeutic alliance between doctor and patient solving the dilemma between the ethical principles of beneficence and autonomy

Life Witness T. Byram Karasu, 2013-10-22 In Life Witness Evolution of the Psychotherapist T Byram Karasu demonstrates how a young therapist can become an expert clinician by transcending his own school of therapy Every young therapist attempts to perfect his skills by anchoring onto a single paradigm and becoming an expert technician of that particular school Within the first five to ten years of practice the so called experiential evolution phase the therapist finds that no single paradigm is suitable for treating all psychopathology The therapist thus begins to appropriate techniques from other schools of psychotherapy and by shifting paradigms synchronizes himself with the patient's mind It is from this synchronization that all his techniques begin to evolve and an expert clinician can evolve into a master psychotherapist The therapist who has transcended his school of psychotherapy now must transcend the field of psychotherapy itself If he wants to address the patient's existential issues as well the therapist first has to come to terms with those issues himself After all the therapist can take the patient only so far as he himself has come Life Witness demonstrates that this formative evolution phase of a therapist encompasses a broad education in literature philosophy and spirituality Karasu ultimately concludes that therapists must find the meaning and purpose of life before they can cultivate an authentic self and become someone whose presence is itself therapeutic Once this occurs all therapeutic messages will naturally emanate from within
