Ultra Short Race Pace Training:

Free Speed Paul Eaglestone, 2025-05-01 Free Speed is coach Paul Eaglestone's breakthrough training method that combines efficient swimming technique with a pace setting formula to achieve faster triathlons. The idea behind Paul's innovative training system is loosely based on ultra short race pace training but with fewer sets and maintaining effort levels rather than working at constant maximum effort. By measuring efficiency through stroke count against time specific goals and with Paul's swimming technique including better muscle performance the triathlete is able to preserve energy for the cycling and running legs of the triathlon without sacrificing pace in the water. In the book Paul explains how to train and practice using the best swim technique and how to improve pace over short distances using his 17/20 method before progressing to race distance as well as every other aspect of triathlon swimming basic equipment race planning open water swimming starts and turns and more. His method brings a cycling mentality to swimming through hydrodynamics attention to detail and marginal gains through mental training. The readers are also given the tools to design their own training sessions based on their own specific goals and targets and always with an eye on getting the most out of each session. Every one of these athletes requires quality training information and experienced coaching advice. Drawing on his 20 years of coaching experience Mario Schmidt-Wendling provides the best training information for ambitious triathletes competing in Olympic to Ironman distance triathlons making Triathlon Success a must have practical guide. This book does not offer generally formulated training plans but rather considers an athlete's individual situation such as their performance level which means the athlete is given the most important basics to be able to make the right decisions for his or her own training. Trainers will also find the book useful as both their work and the most important aspects of training theory for the long distance triathlon are highlighted and explained.
