Wetlands Market And Intervention Failures:

Wetlands: Market and Intervention Failures Kerry Turner, Tom Jones, 2013-11-05 Wetlands are vital and valuable resources both as rich and unique wildlife habitats and for the functions they fulfil providing flood and sediment control and coastal protection as carbon sinks and pollution buffers for their role in storing and recycling nutrients as well as for their recreational value Too often however their true value has been overlooked or underestimated and they have been mismanaged or destroyed as a result This volume commissioned by the OECD presents four case studies of the management policies of wetland environments in the UK USA France and Spain They show how both markets and direct intervention have resulted in failure severely reducing the amount of wetland and jeopardizing the remainder and they set out measures that will mitigate damage in the future Turner and Jones have produced an essential work in the growing area of environmental economics Originally published in 1991 Wetlands R. Kerry Turner, Tom Jones, 1991 Forests: Market and Intervention Failures Soren Wibe, Tom Jones, 2013-11-05 The economic value of forest has long been recognized but the ways in which that value is calculated and the management policies adopted in consequence have all too often resulted in overuse and irreversible destruction This is spectacularly obvious around the Mediterranean basin but it is also true in northern Europe These five case studies commissioned by the OECD examine failures of forest management in Britain Spain Italy Germany and Sweden They look at both market and intervention policies and show how each can further the destruction of the forests and they set out ways in which future policies can evade the mistakes of the past Originally published in 1992 Market and Government Failures in Environmental Management Organisation for Economic Co-operation and Development, 1992

Economics of Natural Resources and the Environment David W. Pearce, R. Kerry Turner, 1989-12-01 Economics of Natural Resources and the Environment brings together the approaches of natural resource economics and environmental economics to provide a comprehensive overview of the economics of national international and global environmental problems A unifying theme throughout the book is the concept of sustainable development defined as maximizing the net benefits of economic development while maintaining the services and quality of natural resources over time The authors emphasize the continuing importance of a mainstream approach They stress economic efficiency getting the most welfare out of a given endowment of resources And they address the larger moral issues as well Chapter topics include the historical development of environmental economics environmental ethics and pollution control policy in free mixed market and centrally planned economies Other current issues seen from an economic perspective include destruction of the ozone layer the greenhouse effect policy weapons in the fight against pollution and the special problems of the third world Economics of Natural Resources and the Environment offers a thorough review and synthesis of the major work of the field's senior scholars It will be of value not only to students of natural resource economics environmental economics geography and environmental sciences but also to all with an interest in economic approaches to environmental issues

The Environment and Emerging Development Issues Partha Dasgupta, Karl-Göran Mäler, 2000 Two and a half billion people are affected directly on a day to day basis by the allocation and use of purely local resources Yet official development economics has concentrated on headline international issues and only recently begun to take account of the dependence of poor countries on their natural resources the link between acute poverty and environmental degradation and the problems associated with the management of local common property such as soil and soil cover water forests and their products animals and fisheries In this volume part of the WIDER Program on the Economics of the Environment expert contributors provide a set of authoritative studies of emerging development issues ranging from foundational matters to case studies original research in areas where there has been a paucity of work to survey papers They address both analytic and empirical issues on the role of environmental resources in the development process presenting explanations of existing situations and policies for the future A wealth of interests and backgrounds is represented and reflected in the cross fertilization between papers

Managing Sustainable Development Michael Carley, Ian Christie, 2017-09-25 In a world where environmental problems spill across political administrative and disciplinary boundaries there is a pressing need for a clear understanding of the kinds of organizations management structures and policy making approaches required to bring about socially equitable and ecologically sustainable development In this second edition the authors incorporate lessons from a decade of work on the conditions of sustainability in both developed and developing countries They prescribe action networks partnerships of flexible achievement oriented

actors and present new case studies demonstrating the success of organizations that have applied this approach They also introduce case studies on action networks that work simultaneously on international national and local levels **Estuaries**

,1999-09-14 The importance and ecological significance of estuaries has been long appreciated In the last few years there has been increased research activity resulting in significant advances in understanding of estuarine ecology This special thematic volume of *Advances in Ecological Research* provides an overview of a number of the important areas Ranging from the macroscale how differences in river basins influence the loads of nutrients through the impacts and fates of the nutrient loads to how both phytoplanktonic and benthic estuarine primary production are regulated There is also a review of the key factors influencing the outcome of management decisions for estuaries from the point of sustainability of estuarine resources This volume is essential reading and reference for all those interested in estuaries including ecologists environmental scientists botanists and zoologists **Economic Valuation of Water Resources in Agriculture** R. Kerry

Turner,2004-01-01 The purpose of this report is to produce a review on water resource valuation issues and techniques specifically for the appraisal and negotiation of raw as opposed to bulk or retail water resource allocation for agricultural development projects The review considers raw water in naturally occurring watercourses lakes wetlands soil and aquifers taking an ecosystem function perspective at a catchment scale and takes account of the demands from irrigated and rainfed agriculture It is hoped that the review will have particular application to developing countries where agreed methods for reconciling competing uses are often absent but nevertheless takes account of valuation approaches that have been made in post industrial economies Elephants, Economics and Ivory Edward B. Barbier,Joanne C. Burgess,Timothy M.

Swanson,David W. Pearce,2013-11-05 Ivory is big business and in some parts of Africa elephants have been hunted almost to extinction in the quest for it The losses to African economies have been catastrophic Now there is an international ban on the trade and conservation is the principal goal This should be a matter for rejoicing but nothing is quite so simple The authors of this book have looked at the overall statistics including those for countries where the elephant population is stable They have considered the multiplicity of economic and social functions fulfilled by ensuring that elephant herds survive tourism a variety of ecological purpose and finally as a source of ivory They show how the careful management of elephants as a resource can best serve African interests This book is at the cutting edge of economic thinking and provides a model for the consideration of the difficult relationship between people and wildlife Originally published in 19990 **Economic Analysis**

of the Environmental Impacts of Development Projects John A. Dixon,Richard A. Carpenter,Louise A. Fallon,Paul B. Sherman,Supachit Manipomoke,2013-11-05 It has always been thought that some level of pollution and waste is unavoidable in development projects But no one has made much effort to quantify and assess the extent of this sort of damage In this book a group of analysts from the Asian Development Bank and from the East West Center propose a means of constructing useful economic evaluations of the impacts of development projects on the environments in which they are constructed This

study demands the systematic evaluation of all the intentional and unintentional consequences of development initiatives before they are determined upon It is essential reading for development economists analysts and bankers Originally published in 1986 Economics of Dryland Management John A. Dixon,David E. James,Paul B. Sherman,2013-11-05 We have always had land in which the agricultural productivity is limited because there is not enough moisture Systems of farming and burning often degrade dryland further until it is desert Today however the problem is becoming much more serious Over 20 per cent of the world s population lives in dryland areas and unless action is taken drylands will increase dramatically This book focuses on the people who live and farm in the drylands their use of land resources and the economic returns from their decisions In a clear and thorough economic appraisal the authors show how it is still possible to arrest the problem Originally published in 1989 *Dryland Management: Economic Case Studies* John A. Dixon,David E. James,Paul B. Sherman,2013-11-05 Drylands are a sizeable part of the world s potentially arable land They vary from the hyper arid regions of the classic deserts of Africa and Asia to the more common semi arid and sub humid areas that support extensive agricultural systems dependent on rainfall or irrigation Following their successful and innovative work *The Economics of Dryland Management* the editors have assembled twenty case studies from nine countries in the continents of Africa Asia North America and Australia They help to explore more fully the costs of land degradation and illustrate the economics of reclamation rehabilitation and prevention The cases in this book present a rich varied and readable survey of a wide range of drylands and their resources Originally published in 19990 The Revaluation of Women's Work Sheila Lewenhak,2013-11-05 This book provides a survey and analysis of the different ways in which women s work is valued throughout the world It challenges the narrow definition of work as paid work as that excludes so many of women s activities It looks at ways in which women s worth has been consistently undervalued in industrial as well as non industrial countries in socialist as well as free enterprise economies These practices distort the national product of countries heavily dependent on women s labour but above all they are among the most obvious marks of the exploitation of women Technological changes are already altering established female male divisions of labour Transnational enterprises often located in Special Economic Zones are reducing differences between industrial and nonindustrial countries Valuing women s work correctly whether unpaid in the home or underpaid outside it is part of the battle against discrimination and poverty Men who do similar work also benefit It is the crucial step towards the achievement of male female equality The book will be particularly valuable for those concerned with the issues in trade unions women s groups international agencies and NGOs and for course in economics and social studies Trading with the Environment Thomas Andersson,Carl Folke,Stefan Nystrom,2013-11-26 Should there be firmer restrictions on trade with more policies aimed at protecting its environmental impacts or would the environment benefit most from unrestricted free trade Do importing countries have a responsibility only to their local ecosystems or are they also responsible for environmental degradation caused by the production of traded goods in exporting

countries Trading the Environment examines both the dependence and the effects of international trade on the earth's life support systems and looks at ways in which trading regulations could be adapted to promote ecologically sustainable economic development. It addresses the issues from a fully integrated approach focusing on the interrelations between ecosystems, economic development and trade. The authors provide a carefully constructed ecological and economic analysis of trade and the environment, examine the existing legal and institutional frameworks and set out 16 recommendations to achieve environment beneficial trade at both national and international levels. Trading with the environment was originally commissioned by the Swedish government and is already regarded thereon essential reference. It makes an excellent introduction as well as constructive analysis both for students and for policy makers and professional economists and other scientists working on the issues. Published in 1995.

Structural Adjustment, the Environment and Sustainable Development
David Reed, 2013-11-05. This is a pioneering study which should serve as a model for future research and will to a wide audience. Dharam Ghai, Director, United Nations Research Institute for Social Development. Structural Adjustment and the Environment. Earthscan 1992. This was the first book to fully examine the effects of structural adjustment programmes, the economic reform policies required by the World Bank and IMF as part of their lending operations with borrowing countries. To widespread critical acclaim, it exposed the damaging environmental and social effects of structural adjustment policies and called for a thorough revision of the then current development policy. This new work, Structural Adjustment, the Environment and Sustainable Development, is a major step forward in the study of structural adjustment policies. It looks in detail at new research and analysis into their effects and incorporates recent studies by a wide range of academics and policy makers, leading experts and institutes. Focusing on nine in-depth case studies, the book examines the complex links between macroeconomic policies, social impacts and environmental outcomes and takes a forward-looking perspective in outlining the alternatives to current structural adjustment policies. Review quotes for Structural Adjustment and the Environment: Should be essential reading for all students of development. Third World Planning Review. Breaks new ground in the debate on structural adjustment generally and in the environment development debate. International Affairs. The most substantial contribution to date to what is undoubtedly an important area. Development and Change. David Reed is director of the Macroeconomics for Sustainable Development Programme of WWF International and editor of Structural Adjustment and the Environment. Earthscan 1992. Originally published in 1996.
