What Does It Mean To Be Human:

What Does it Mean to be Human? Life, Death, Personhood and the Transhumanist Movement D. John Doyle, 2018-09-01
This book is a critical examination of the philosophical and moral issues in relation to human enhancement and the various related medical developments that are now rapidly moving from the laboratory into the clinical realm. In the book the author critically examines technologies such as genetic engineering, neural implants, pharmacologic enhancement, and cryonic suspension from transhumanist and bioconservative positions, focusing primarily on moral issues and what it means to be a human in a setting where technological interventions sometimes impact strongly on our humanity. The author also introduces the notion that death is a process rather than an event, as well as identifies philosophical and clinical limitations in the contemporary determination of brain death as a precursor to organ procurement for transplantation. The discussion on what exactly it means to be dead is later applied to explore philosophical and clinical issues germane to the cryonics movement. Written by a physician/scientist and heavily referenced to the peer-reviewed medical and scientific literature, the book is aimed at advanced students and academics but should be readable by any intelligent reader willing to carry out some side reading. No prior knowledge of moral philosophy is assumed, as the various key approaches to moral philosophy are outlined early in the book.

[What Does It Mean to Be Human?](#), 2001-11-20. In an inspirational act of faith and hope, nearly one hundred contributors—social activists, thinkers, artists, and spiritual leaders—reflect with poignant candor on our shared human condition and attempt to define a core set of human values in our rapidly changing society. Contributors include The Dalai Lama, Wilma Mankiller, Oscar Arias, Jimmy Carter, Cornel West, Jack Miles, Mother Teresa, Nancy Willard, Elie Wiesel, James Earl Jones, Joan Chittister, Mary Evelyn Tucker, Vaclav Havel, Archbishop Desmond Tutu. *What Does It Mean To Be Human* is a vital meditation on the endless possibilities of our humanity.

Journal of Philosophy, Psychology and Scientific Methods, 1922 [The Living Church](#), 1917 **The Leather Workers' Journal**, 1910 **What Does it Mean to be Human?** Richard Potts, Christopher Sloan, 2010. This generously illustrated book tells the story of the human family, showing how our species' physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes. In *What Does It Mean to Be Human*, Rick Potts, director of the Smithsonian's Human Origins Program, and Chris Sloan, National Geographic's paleoanthropology expert, delve into our distant past to explain when, why, and how we acquired the unique biological and cultural qualities that govern our most fundamental connections and interactions with other people and with the natural world. Drawing on the latest research, they conclude that we are the last survivors of a once-diverse family tree and that our evolution was shaped by one of the most unstable eras in Earth's environmental history. The book presents a wealth of attractive new material, especially developed for the Hall's displays, from life-like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives, along with informative graphics and illustrations. In coordination with the exhibit opening, the PBS

program NOVA will present a related three part television series and the museum will launch a website expected to draw 40 million visitors

A Philosophical Journey into the Anthropocene Agostino Cera, 2023-01-09 A Philosophical Journey into the Anthropocene Discovering Terra Incognita presents the Anthropocene not only as a geological epoch but rather as the potential marker of our age and the most faithful expression of the current zeitgeist Insofar as the Anthropocene establishes that the human agency as technological omnipower represents a global geophysical force capable of altering the destiny of the Earth system the coming of this new epoch shows that technology now embodies the subject of both history and nature In this totalized form technology achieves the status of an integral epochal phenomenon the new environment for human life Agostino Cera argues that the technisches Zeitalter age of technology outlined by twentieth century philosophical thought is fully realized in the Anthropocene and that a more appropriate name for this planetary framework is therefore Technocene The book develops along four basic directions epistemological ontological anthropological and ethical It argues that the Anthropocene is something radically new a terra incognita or an epistemic hyperobject with a geohistorical barycenter giving rise to an unprecedented form of reification of nature reification of nature an unexpected version of anthropocentrism Adornian Prometheism and an unpredictable ethical paradox paradox of omnipresence responsibility **The American Ecclesiastical Review** Herman Joseph Heuser, 1949 What Does it Mean to Be Human? Was heißt es, Mensch zu sein? Brigitte Buchhammer, Bettina Zehetner, 2024 This celebratory publication is an expression of deepest gratitude to Herta Nagl-Docekal With this volume colleagues graduates and friends want to celebrate her philosophical oeuvre Her entire life's work has been characterized by both humanitarian and humanist commitment to seek the principles of justice in the coexistence of human beings but that philosophy also provides the basic yardstick to highlight distortions on recent theories Her philosophical work is alive with the commitment to a philosophy which is compelled to seek the principles of greater justice and solidarity

Population in the Human Sciences Philip Kreager, Bruce Winney, Stanley Ulijaszek, Cristian Capelli, 2015-03-05 The Human Sciences address problems in nature and society that often require coordinated approaches of several scientific disciplines and scholarly research embracing the social and biological sciences and history When we wish for example to understand how some sub populations and not others come to be vulnerable why a disease spreads in one part of a population and not another or which gene variants are transmitted across generations then a remarkable range of disciplinary perspectives need to be brought together from the study of institutional structures cultural boundaries and social networks down to the microbiology of cellular pathways and gene expression The need to explain and address differential impacts of pressing contemporary issues like AIDS ageing social and economic inequalities and environmental change are well known cases in point Population concepts models and evidence lie at the core of approaches to all of these problems if only because accurate differentiation and identification of groups their structures constituents and relations between sub populations are necessary to specify their nature and extent The study of population thus draws both on statistical

methodologies of demography and population genetics and sustained observation of the ways in which populations and sub populations are formed maintained or broken up in nature in the laboratory and in society In an era in which research needs to operate on multiple levels population thinking thus provides a common ground for communication and critical thought across disciplines Population in the Human Sciences addresses the need for review and assessment of the framework of interdisciplinary population studies Limitations to prevailing postwar paradigms like the Evolutionary Synthesis and Demographic Transition were becoming evident by the 1970s Subsequent decades have witnessed an immense expansion of population modelling and related empirical inquiry with new genetic developments that have reshaped evolutionary population and developmental biology The rise of anthropological and historical demography and social network analysis are playing major roles in rethinking modern and earlier population history More recently the emergence of sub disciplines like biodemography and evolutionary anthropology and growing links between evolutionary and developmental biology indicate a growing convergence of biological and social approaches to population
