TPM for the Lean Factory Keisuke Arai, 2017-10-06 Lean manufacturing cannot happen in a factory that lacks dependable effective equipment Breakdowns and processing defects translate into excess work in process and finished inventory kept on hand just in case Recurring minor stoppages force employees to watch automated equipment that should run by itself TPM gives a framework for addressing such problems but many companies implement TPM at a superficial level and the resulting productivity gains fall short of their potential If your TPM implementation has resulted in posters and logos rather than a rise of productivity how are you addressing this halt of progress In TPM for the Lean Factory authors Sekine and Arai teach you to identify and attack the key equipment related problems and misunderstandings that make plants miss their lean manufacturing goals Written for companies with a basic TPM framework already in place you ll learn three powerful approaches for cutting this waste The new 5Ss focusing on standard locations and labeling through the first 2Ss Instant maintenance mastering quick repairs of minor equipment failures Improved setup operations organizing the preparation to save time and prevent errors Chapters on cell design product and process quality factor testing and daily equipment inspection give you additional weapons for fighting waste and low productivity For practical application an implementation overview summarizes the steps for each topic keyed to a set of 50 adaptable

Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) Alin Posteucă, Shigeyasu Sakamoto, 2017-03-27 Providing a reasonable level of profitability through productivity is and will remain one of the fundamental tasks of the management teams of any production company Manufacturing Cost Policy Deployment MCPD and Methods Design Concept MDC The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness Manufacturing Cost Policy Deployment MCPD and Methods Design Concept MDC Both MCPD and MDC are the result of long time synthesis and distillation being implemented successfully totally or partially in many companies The MCPD system developed by Alin Posteucă is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement MCI for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost The MDC developed by Shigeyasu Sakamoto design the effective manufacturing methods using a tool of engineering steps identifying ideas for increasing

productivity called KAIZENSHIRO improvable value as a target The MDC results on production methods lead to effectiveness of work measurement for performance P and to knowledge and improvement of production control and planning as utilization U in order to achieve labor target costs The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing productivity and profitability to increase the competitive level of their manufacturing company

Manufacturing Cost Policy Deployment (MCPD) Profitability Scenarios Alin Posteuca, 2018-10-09 This book shows how to consistently obtain annual and multiannual manufacturing target profit regardless of the evolution of sales volumes increasing or decreasing using the Manufacturing Cost Policy Deployment MCPD system Managers and practitioners within the manufacturing companies will discover a practical approach within the MCPD system that will help them develop and support their long term medium term and short term profitability and productivity strategy The book presents both the basic concepts of MCPD and the key elements of transforming manufacturing companies through MCPD system as well as supporting the consistent growth of external and internal profit by directing all systematic and systemic improvements based on meeting the annual and multiannual Manufacturing Cost Improvement MCI targets and means for each Product Family Cost PFC This book is unique because it presents two types of systematic and systemic improvement projects for MCI that have been applied over the years in various multinational manufacturing companies operating in highly competitive markets in order to address the consistent reduction of unit manufacturing costs by improving the Cost of Losses and Waste CLW Readers will discover the practical approach of MCI based on a structured approach to MCPD system beyond the traditional approach to manufacturing improvements based mainly on improved time and quality Therefore from the perspective of the MCPD system the multiannual manufacturing target profits are met while the annual and multiannual manufacturing target costs are a predetermined stake and not a result of the improvements already made

Condition-Based Maintenance and Residual Life Prediction Chandan Deep Singh, Davinder Singh, Kanwal Jit Singh, Harleen Kaur, 2025-03-10 Condition Based Maintenance and Residual Life Prediction is essential for those looking to effectively implement condition based maintenance strategies and enhance fault detection through a comprehensive understanding of vibration data analysis and residual life prediction addressing key challenges in the field Issues related to condition based maintenance include its high initial cost new techniques that can be difficult to implement due to resistance older equipment that can be difficult to retrofit with sensors and monitoring equipment and difficult to

access equipment during production that is difficult to spot measure Keeping the above issues in mind a general handbook for condition based maintenance and residual life prediction is required to carry out in fault detection Condition Based Maintenance and Residual Life Prediction aims to develop analyze and model condition based maintenance and residual life prediction through vibration data The analysis of vibration responses will aid in developing a fault detection system The sources of vibration may be due to the presence of different types of defects such as cracks in the shaft a bent shaft or misalignment of shafts This will give designers a diagnostic tool for predicting the trends of vibration conditions leading to early fault detection The devised tool will be capable of quantifying the amplitude of vibration based on the severity of defects With the features available in the devised diagnostic tool the proposed model can be used for design predictive maintenance and condition based maintenance
