energy strategy has global ramifications and impact and central to this strategy is the country's transition from coal to gas. The book presents the culmination of a two year collaboration between the Development Research Center of the State Council DRC and Shell. With the Chinese government's strategic aim to increase the share of gas in the energy mix from 5.8% in 2014 to 10% and 15% in 2020 and 2030 respectively the book outlines how China can achieve its gas targets. Providing both quantifiable metrics and policy measures for the transition it is a much needed addition to the literature on Chinese energy policy. The research and the resulting recommendations of this study have fed directly into the Chinese government's 13th Five Year Plan and provide unique insights into the Chinese government and policy making. Due to its global impact the book is a valuable resource for policy makers in both China and the rest of the world. Managing Energy Risk Markus Burger, Bernhard Graeber, Gero Schindlmayr, 2008-04-30. Mathematical techniques for trading and risk management. Managing Energy Risk closes the gap between modern techniques from financial mathematics and the practical implementation for trading and risk management. It takes a multi commodity approach that covers the mutual influences of the markets for fuels, emission certificates and power. It includes many practical examples and covers methods from financial mathematics as well as economics and energy related models. Hearing to Review Trading of Energy-based Derivatives United States. Congress. House. Committee on Agriculture. Subcommittee on General Farm Commodities and Risk Management, 2009. **Hearing to Review Trading of Energy-Based Derivatives, Serial No. 110-26, July 12, 2007, 110-1 Hearing, ***, 2009. Trading Natural Gas Futures Through Simulation Predictive Modeling and Optimization Amine Kamali, 2016. *Intraday Patterns in Natural Gas Futures* Jung Heon Song, 2016. High Frequency Trading is pervasive across all electronic financial markets. As algorithms replace an increasing number of tasks previously performed by humans cascading effects similar to the Flash Crash of May 6th 2010 become more likely. In this study we bring together a number of different data analysis tools to improve our understanding of natural gas futures trading activities. We focus on Fourier analysis and cointegration between weather forecasts and natural gas prices. From the Fourier analysis of Natural Gas futures market we see strong evidences of High Frequency Trading in the market. The Fourier components corresponding to high frequencies 1 are becoming more prominent in the recent years and 2 are much stronger than could be expected from the overall trading records. Additionally significant amount of trading activities occur in the first second of every minute which is a telltale sign of the Time Weighted Average Price (TWAP) execution algorithms. To illustrate the potential for cascading events we study how weather forecasts drive natural gas prices. After separating the data according to seasons the temperature forecast is strongly cointegrated with natural gas price. This splitting of data is necessary because in different seasons the natural gas demand depends on temperature through different mechanisms. We are also able to show that the variations in temperature forecasts contribute to a significant percentage of the average daily price fluctuations which supports the hypothesis that the variations in temperature dominates the volatility of natural gas trading. **Natural Gas: A**

Commercial Perspective Andrej Pustišek, Michael Karasz, 2017-03-21 This book discusses and explains the economics of each stage of the natural gas value chain including the economic impact of restrictions rules and decisions that are ostensibly technical in nature as well as commercially relevant contractual stipulations Each chapter features several real world examples illustrating the essential points Natural gas is broadly considered the leading conventional source of primary energy Complementing renewable energies utilization and offering a highly flexible yet relatively clean fuel the worldwide natural gas markets are expected to grow Despite the fact that Europe where a degree of stagnation in natural gas consumption is being observed and is expected to continue is not following this trend international natural gas markets are becoming increasingly interdependent Therefore any analysis and discussion of natural gas markets at each level has to have an international rather than national focus *Natural Gas Pricing in Competitive Markets* International Energy Agency, 1998 **Official Gazette of the United States Patent and Trademark Office** , 1999-03
