Traditional Chinese Medicine Diagnosis Study Guide Qiao Yi, Al Stone, 2008 **TCM Case Studies: Pain**

Management Youping Hu, Al Stone, Junmei Wu, 2014-10-01 In the practice of TCM there is no complaint more common than pain. This text describes the treatment of pain syndromes according to the standard of care practiced among the professional Chinese medicine doctors in modern China. Because modern TCM in China commonly exists in an integrated environment, the topics include both patient-centered complaints such as headache as well as Western designations such as thoracic outlet syndrome. In either case, the complaint immediately gives way to the most relevant information a practitioner needs, including possible patterns and their patho-mechanisms, treatment principles and point and herb prescriptions. Following the needs of the professional, learning opportunities are provided thanks to copious case studies written by experts in the field of pain management and internal medicine. Chapters then target students studying TCM with discussions that provide a deeper consideration of the topics. Each chapter also features a few multiple-choice questions that challenge and assist in memorization.

Fundamentals of Chinese Medicine Guangren Sun, Douglas Darwin Eisenstark, Qingrong Zhang, 2014-07-01 The Fundamentals of Chinese Medicine is an international collaboration of Chinese medicine experts from both China and the west and co-written by an experienced practitioner who has been teaching the subject in western schools. This book covers the theory of traditional Chinese medicine and discusses the topic in greater depth than any English language textbook available today. An abundance of classical references are also included here. The material in this text comprises course material for a professional course of training in TCM, which is also the basic material for studying and comprehension of other more advanced courses in TCM. The main contents include the physiological basis of essence, qi, yin, yang, and the five phases, followed by the theories of essence, qi, and blood fluids and spirit. Organ manifestation, channel and collateral theory, constitutional theory, etiology and patho-mechanism, and also principles of prevention and treatment are expounded upon. The knowledge in this textbook is approximately equal to that for students of TCM colleges in China and coincides with the requirements in the Examination Syllabus for TCM Professional Practitioners Worldwide.
