What Makes Vehicles Safer? Karen Latchana Kenney, 2015-08-01 If you pay attention to the news you ve probably seen some scary headlines car and plane crashes trains going off the tracks and more But the truth is these kinds of accidents are rare Engineers have designed features that make vehicles as safe as possible Antilock brakes the global positioning system and sonar navigation equipment are just a few of the improvements that help people travel more safely Learn more about how the technology in vehicles works to keep us safe How Safe is Safe Enough? E. E. Lewis, 2014-10-14

Every time an airplane crashes a gas line explodes a bridge collapses or a contaminant escapes the public questions whether

the benefits that technology brings are worth its risks Written in laymen s language How Safe Is Safe Enough explores the realities of the risks that technology presents and the public s perceptions of them E E Lewis examines how these perceptions are reconciled with economic interests and risk assessors analyses in messy and often contentious political processes that determine acceptable levels of safety levels that often depend more on the perceived nature of the risks than on the number of deaths or injuries that they cause The author explains why things fail and why design necessitates tradeoffs between performance cost and safety He details methods for identifying and eliminating design flaws and illustrates the consequences when they fail Lewis examines faulty machine interfaces that cause disastrous human errors and highlights how cost cutting and maintenance neglect have led to catastrophic consequence How Safe Is Safe Enough explores how society determines adequate levels of safety outlining the announcement and enforcement of safety regulations and addressing controversies surrounding cost benefit analysis The author argues that large regulatory effects stem from the public s wide ranging perceptions of three classes of accidents the many everyday accidents causing one or two deaths at a time rare disasters causing large loss of life and toxic releases leading to uncertain future health risks The nuclear disaster at Fukushima culminates the discussion exemplifying the dichotomies faced in reconciling professional risk assessors statistical approaches with the citizenry s fears and perceptions For better or worse technology permeates our lives and much of it we don t understand how it works and what the chances are that it will fail dangerously Such interest and concerns are at the heart of this authoritative provocative analysis
