R. Hauer, Jack Stanford, Robert Newell, 2008-06-24 The purpose of this volume is to encourage and facilitate focused research and provide a forum for scholarly exchange about the status of Mayfly and Stonefly science Professor John Brittain whose research is focused on freshwater entomology especially egg development and life cycle strategies of Ephemeroptera and Plecoptera presents a chapter reflecting on the quality of mayflies as good indicators of global warming and the quality of streams and lakes Professor Emeritus Andrew Sheldon whose interests have encompassed community and population ecology of aquatic animals over a span of more than 40 years especially insects and fishes explores topics of Scale and Hierarchy and the Ecology of Plecoptera discussing how studies emphasizing scale and perspective reveal importance of stoneflies to ecosystems Other topics cover a broad base of disciplines including morphology physiology phylogeny taxonomy ecology and conservation The chapters have been compiled

Biogeography, Time and Place: Distributions, Barriers and Islands Willem Renema, 2007-09-07 Biogeography considers the distribution of biological units over a wide range of scales The units range from genotypes populations and species to families and higher taxa Processes can be local such as the isolation on islands due to sea level fluctuations or large scale tectonic processes that separates continents and creates oceans In all processes time is an important factor and by combining data on recent patterns with paleontological data the understanding of the distribution of extant taxa can be improved This volume focuses on speciation due to isolation in island like settings and the evolution of large scale diversity as the result of origination maintenance and extinction *Thorp and Covich's Freshwater Invertebrates* Neusa Hamada, James H.
