Trace Metals In Aquatic Systems:

Trace Metals in Aquatic Systems Robert Peter Mason, 2013 This book provides a detailed examination of the concentration form and cycling of trace metals and metalloids through the aquatic biosphere and has sections dealing with the atmosphere the ocean lakes and rivers It discusses exchanges at the water interface air water and sediment water and the major drivers of the cycling concentration and form of trace metals in aquatic systems The initial chapters focus on the fundamental principles and modelling approaches needed to understand metal concentration speciation and fate in the aquatic environment while the later chapters focus on specific environments with case studies and research highlights Specific examples deal with metals that are of particular scientific interest such as mercury iron arsenic and zinc and the book deals with both pollutant and required nutrient metals and metalloids The underlying chemical principles controlling toxicity and bioavailability of these elements to microorganisms and to the aquatic food chain are also discussed EBL

Metal Pollution in the Aquatic Environment U. Förstner, G.T.W. Wittmann, 2012-12-06 Aquatic chemistry is becoming both a rewarding and substantial area of inquiry and is drawing many prominent scientists to its fold Its literature has changed from a compilation of compositional tables to studies of the chemical reactions occurring within the aquatic environments But more than this is the recognition that human society in part is determining the nature of aquatic systems Since rivers deliver to the world ocean most of its dissolved and particulate components the interactions of these two sets of waters determine the vitality of our coastal waters This significant volume provides not only an introduction to the dynamics of aquatic chemistries but also identifies those materials that jeopardize the resources of both the marine and fluvial domains Its very title provides its emphasis but clearly not its breadth in considering natural processes The book will be of great value to those environmental scientists who are dedicated to keeping the resources of the hydrosphere renewable

As the size of the world population becomes larger in the near future and as the uses of materials and energy show parallel increases the rivers and oceans must be considered as a resource to accept some of the wastes of society The ability of these waters and the sediments below them to accommodate wastes must be assessed continually The key questions relate to the capacities of aqueous systems to carry one or more pollutants

Rajakumar, 2021-03-24 This volume explores recent research trends and achievements in environmental pollution remediation e.g. water, air, soil and compiles critical and constructive papers and reviews with a focus on advances in bioremediation and green technology solutions for waste minimization, waste management and pollution control. The book is timely as the need for researchers and engineers to develop sustainable and green eco-friendly remediation technologies is increasing with a growing global population, stressed agricultural systems and an environment impacted by climate change. A key focus of the book is on the efficient use of agricultural waste residues as viable substrates for creating materials for environmental clean up and the possible conversion of these pollutants to sustainable bioresources. The volume will be of interest to sustainability researchers, environmental engineers, industry managers and agricultural scientists.
