Tracking Truth Knowledge Evidence And Science:

Tracking Truth Sherrilyn Roush, 2005-11-10 Tracking Truth presents a unified treatment of knowledge evidence and epistemological realism and anti realism about scientific theories A wide range of knowledge related phenomena especially but not only in science strongly favour the idea of tracking as the key to what makes something knowledge A subject who tracks the truth an idea first formulated by Robert Nozick has the ability to follow the truth through time and changing circumstances Epistemologists rightly concluded that Nozick s theory was not viable but a simple revision of that view is not only viable but superior to other current views In this new tracking account of knowledge in contrast to the old view knowledge has the property of closure under known implication and troublesome counterfactuals are replaced with well defined conditional probability statements Of particular interest are the new view s treatment of skepticism reflective knowledge lottery propositions knowledge of logical truth and the question why knowledge is power in the Baconian sense Ideally evidence indicates a hypothesis and discriminates it from other possible hypotheses This is the idea behind a tracking view of evidence and Sherrilyn Roush provides a defence of a confirmation theory based on the Likelihood Ratio The accounts of knowledge and evidence she offers provide a deep and seamless explanation of why having better evidence makes one more likely to have knowledge Roush approaches the question of epistemological realism about scientific theories through the question what is required for evidence and rejects both traditional realist and traditional anti realist positions in favour of a new position which evaluates realist claims in a piecemeal fashion according to a general standard of evidence The results show that while anti realists were immodest in declaring a priori what science could not do realists were excessively sanguine about how far our actual evidence has so far taken us

Tracking Truth Sherrilyn Roush, 2005-11-10 Tracking Truth presents a unified treatment of knowledge evidence and epistemological realism and anti realism about scientific theories A wide range of knowledge related phenomena especially but not only in science strongly favour the idea of tracking as the key to what makes something knowledge A subject who tracks the truth an idea first formulated by Robert Nozick has the ability to follow the truth through time and changing circumstances Epistemologists rightly concluded that Nozick s theory was not viable but a simple revision of that view is not only viable but superior to other current views In this new tracking account of knowledge in contrast to the old view knowledge has the property of closure under known implication and troublesome counterfactuals are replaced with well defined conditional probability statements Of particular interest are the new view s treatment of skepticism reflective knowledge lottery propositions knowledge of logical truth and the question why knowledge is power in the Baconian sense Ideally evidence indicates a hypothesis and discriminates it from other possible hypotheses This is the idea behind a tracking view of evidence and Sherrilyn Roush provides a defence of a confirmation theory based on the Likelihood Ratio The accounts of knowledge and evidence she offers provide a deep and seamless explanation of why having better evidence makes one more likely to have knowledge Roush approaches the

question of epistemological realism about scientific theories through the question what is required for evidence and rejects both traditional realist and traditional anti realist positions in favour of a new position which evaluates realist claims in a piecemeal fashion according to a general standard of evidence The results show that while anti realists were immodest in declaring a priori what science could not do realists were excessively sanguine about how far our actual evidence has so far taken us *Evidence, Respect and Truth* Liat Levanon, 2022-11-03 Can we rely solely on statistics when we judge what is true and just This book takes a holistic approach to addressing this question It considers the legal trial as its paradigmatic case study before analysing a wide range of different cases including profiling the use of algorithms to predict students grades and the authorisation of automated cars The book suggests that when we make judgements about the truth or about justice approximations are not good enough Truth and justice are uncompromising They must be so because the value that underlies them both is respect and respect takes no compromise Thus in the search for truth as in the search for justice a body of evidence that imposes a statistical compromise will not do Only evidence that in principle allows reaching the truth and doing justice is good evidence Once such evidence has been traced the burden is on us to make good use of the evidence and reach truth and justice We might or might not succeed but once we have done our best on evidence that allows success our judgements are justified and as such they can resolve conflicts over the truth and over justice The Nature of Scientific Knowledge Kevin McCain, 2016-06-25 This book offers a comprehensive and accessible introduction to the epistemology of science It not only introduces readers to the general epistemological discussion of the nature of knowledge but also provides key insights into the particular nuances of scientific knowledge No prior knowledge of philosophy or science is assumed by *The Nature of Scientific Knowledge* Nevertheless the reader is taken on a journey through several core concepts of epistemology and philosophy of science that not only explores the characteristics of the scientific knowledge of individuals but also the way that the development of scientific knowledge is a particularly social endeavor The topics covered in this book are of keen interest to students of epistemology and philosophy of science as well as science educators interested in the nature of scientific knowledge In fact as a result of its clear and engaging approach to understanding scientific knowledge *The Nature of Scientific Knowledge* is a book that anyone interested in scientific knowledge knowledge in general and any of a myriad of related concepts would be well advised to study closely Knowing and Checking Guido Melchior, 2019-04-29 Checking is a very common concept for describing a subject's epistemic goals and actions Surprisingly there has been no philosophical attention paid to the notion of checking This is the first book to develop a comprehensive epistemic theory of checking The author argues that sensitivity is necessary for checking but not for knowing thereby finding a new home for the much discussed modal sensitivity principle He then uses the distinction between checking and knowing to explain central puzzles about knowledge particularly those concerning knowledge closure bootstrapping and the skeptical puzzle *Knowing and Checking An Epistemological Investigation* will be of interest to epistemologists and other philosophers

Klein, 2017-11-24 The Gettier Problem has shaped most of the fundamental debates in epistemology for more than fifty years Before Edmund Gettier published his famous 1963 paper it was generally presumed that knowledge was equivalent to true belief supported by adequate evidence Gettier presented a powerful challenge to that presumption This led to the development and refinement of many prominent epistemological theories for example defeasibility theories causal theories conclusive reasons theories tracking theories epistemic virtue theories and knowledge first theories The debate about the appropriate use of intuition to provide evidence in all areas of philosophy began as a debate about the epistemic status of the Gettier intuition The differing accounts of epistemic luck are all rooted in responses to the Gettier Problem The discussions about the role of false beliefs in the production of knowledge are directly traceable to Gettier's paper as are the debates between fallibilists and infallibilists Indeed it is fair to say that providing a satisfactory response to the Gettier Problem has become a litmus test of any adequate account of knowledge even those accounts that hold that the Gettier Problem rests on mistakes of various sorts This volume presents a collection of essays by twenty six experts including some of the most influential philosophers of our time on the various issues that arise from Gettier's challenge to the analysis of knowledge Explaining Knowledge sets the agenda for future work on the central problem of epistemology Knowledge in Contemporary Philosophy Stephen Hetherington, Markos Valaris, 2021-09-20 The Philosophy of Knowledge A History presents the history of one of Western philosophy's greatest challenges understanding the nature of knowledge Divided chronologically into four volumes it follows conceptions of knowledge that have been proposed defended replaced and proposed anew by ancient medieval modern and contemporary philosophers This volume covers contemporary discussions about scientific social and self knowledge and attempts to understand knowledge naturalistically contextually and normatively With original insights into the vast sweep of ways in which philosophers have sought to understand knowledge The Philosophy of Knowledge A History embraces what is vital and evolving within contemporary epistemology Overseen by

an international team of leading philosophers and featuring 50 specially commissioned chapters this is a major collection on one of philosophy's defining topics

The Gettier Problem Stephen Hetherington, 2018-11-08 When philosophers try to understand the nature of knowledge they have to confront the Gettier problem This problem set out in Edmund Gettier's famous paper of 1963 has yet to be solved and has challenged our best attempts to define what knowledge is This volume offers an organised sequence of accessible and distinctive chapters explaining the history of debate surrounding Gettier's challenge and where that debate should take us next The chapters describe and evaluate a wide range of ideas about knowledge that have been sparked by philosophical engagements with the Gettier problem including such phenomena as fallibility reasoning evidence reliability truth tracking context luck intellectual virtue wisdom conceptual analysis intuition experimental philosophy and explication The result is an authoritative survey of fifty plus years of epistemological research along with provocative ideas for future research into the nature of knowledge

This Is Epistemology J. Adam Carter, Clayton Littlejohn, 2021-04-20 What is knowledge Why is it valuable How much of it do we have if any at all and what ways of thinking are good ways to use to get more of it These are just a few questions that are asked in epistemology roughly the philosophical theory of knowledge This is Epistemology is a comprehensive introduction to the philosophical study of the nature origin and scope of human knowledge Exploring both classic debates and contemporary issues in epistemology this rigorous yet accessible textbook provides readers with the foundation necessary to start doing epistemology Organized around 11 key subtopics and assuming no prior knowledge of the subject this volume exposes readers to diverse often contentious perspectives guiding readers through crucial debates including Hume's problem of induction Descartes' engagement with radical skepticism rationalist and empiricist evaluations of a priori justification and many more The authors avoid complex technical terms and jargon in favor of an easy to follow informal writing style with engaging chapters designed to stimulate student interest and encourage class discussion Throughout the text a wealth of up to date references and links

New Perspectives on Epistemic Closure Matthew Jope, Duncan Pritchard, 2022-09-30 This volume brings together new research on the topic of

epistemic closure from both leading philosophers and emerging voices in epistemology. It connects epistemic closure principles to related themes in epistemology such as scepticism, dogmatism, evidentialism, epistemic logic, and modal epistemology. Epistemic closure is of central importance to contemporary epistemology so much so that no epistemology is complete without an answer to the question of where it stands on the issue. The chapters in this book touch on the central themes of closure and transmission and argue for and against different closure and transmission principles. The contributors address issues such as whether knowledge and justification are closed under deductive entailment, whether scepticism can be properly contained by restricting closure principles, whether justification for a set of premises can fail to transmit across inference to a conclusion, Moore's Paradox, and which theories of knowledge, contextualism, contrastivism, or relevant alternatives epistemology emerge from denying closure. *New Perspectives on Epistemic Closure* will be of interest to scholars and advanced students working in epistemology.

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27. This book illustrates the program of Logical Informational Dynamics. Rational agents exploit the information available in the world in delicate ways, adopt a wide range of epistemic attitudes, and in that process constantly change the world itself. Logical Informational Dynamics is about logical systems putting such activities at center stage, focusing on the events by which we acquire information and change attitudes. Its contributions show many current logics of information and change at work, often in multi-agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program. However, this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own. The reader will see the state of the art in such topics as information update, belief change, preference learning over time, and strategic interaction in games. Moreover, no tight boundary has been enforced, and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science. The theme of this book lies at the interface of many disciplines. Logic is the main methodology, but the various chapters cross easily between mathematics, computer science, philosophy, linguistics, cognitive and social sciences, while also ranging from pure theory to empirical work. Accordingly, the authors of this book represent a wide variety of original thinkers from different research communities. And their interconnected themes challenge at the same time how we think of logic, philosophy, and computation. Thus, very much in line with van Benthem's work over many decades, the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians, broadly conceived, exploring their new themes today. And at the same time, in doing so, it offers a broader conception of logic with a certain grandeur, moving its horizons beyond the traditional study of consequence relations.

Rationality and Belief Ralph Wedgwood, 2023 This book gives a general theory of rational belief Although it can be read by itself is a sequel to the author's previous book *The Value of Rationality* Oxford 2017 It takes the general conception of rationality that was defended in that earlier book and combines it with an account of the varieties of belief and of what it is for these beliefs to count as correct to develop an account of what it is for beliefs to count as rational According to this account rationality comes in degrees the degree to which one's beliefs counts as rational is determined by their distance from a corresponding probability function where this distance is measured by those beliefs expected degree of incorrectness according to the probability function the account also involves an explanation of what determines exactly which probability function plays this role in each case and of why this probability function should play this role In developing and defending this account new light is shed on several central epistemological issues These issues include the distinction between propositional and doxastic justification the debates between internalism and externalism and between foundationalism and coherentism the significance or lack of it of the notion of evidence the relationship between credences full belief inference and suspension of judgment the nature of the kind of possibility that is presupposed by the relevant sort of probability and whether rationality is diachronic so that the beliefs that it is rational for us to have now depend in part on the beliefs that we held in the past Finally some suggestions are made about how this theory bears on a range of further topics including the defeasibility of inference scepticism and the analysis of knowledge
