Computational Systems Biology X Corrado Priami, Falko Dressler, Ozgur B. Akan, Alioune Ngom, 2010-06-27 Technology is taking us to a world where myriads of heavily networked devices interact with the physical world in multiple ways and at many levels from the global Internet down to micro and nanodevices Many of these devices are highly mobile and autonomous and must adapt to the surrounding environment in a totally unsupervised way A fundamental research challenge is the design of robust decentralized computing systems that are capable of operating in changing environments and with noisy input and yet exhibit the desired behavior and response time under constraints such as energy consumption size and processing power These systems should be able to adapt and learn how to react to unforeseen scenarios as well as to display properties comparable to social entities The observation of nature has brought us many great and unforeseen concepts Biological systems are able to handle many of these challenges with an elegance and efficiency far beyond current human artifacts Based on this observation bio inspired approaches have been proposed as a means of handling the complexity of such systems The goal is to obtain methods to engineer technical systems which are of a stability and efficiency comparable to those found in biological entities This Special Issue on Biological and Biologically inspired Communication contains the best papers from the Second International Conference on Bio Inspired Models of Network Information and Computing Systems BIONETICS 2007 The BIONETICS conference aims to bring together researchers and scientists from several disciplines in computer science and engineering where bio inspired methods are investigated as well as from bioinformatics to deepen the information exchange and collaboration among the different communities **Transactions on Computational Systems**
