Origins as a Paradigm in the Sciences and in the Humanities Paola Spinozzi,Alessandro Zironi,2010 In this volume the assumption that origins can be defined as a hermeneutic paradigm in the humanities and in the sciences is explored in relation to specific theoretical frameworks and research methodologies By investigating how origins have been conceptualised in different domains of knowledge biology primatology psychology linguistics history of science critical theory classical studies philology literary criticism strategy and accounting a double movement has been generated towards the very core of each discipline and beyond disciplinary boundaries Which are the most productive theories and methods each discipline has elaborated for investigating origins Can they become trans disciplinary Which synergic enquiries can be devised in order to expand and share knowledge Explaining how and why various disciplines have responded to such questions involves delving into their histories and cultural ideologies in order to verify whether the topic of origins can function as a powerful connector between scientific and humanistic territories

Unbelievable Michael Newton Keas,2019-01-08 Unbelievable explodes seven of the most popular and pernicious myths about science and religion Michael Newton Keas a historian of science lays out the facts to show how far the conventional wisdom departs from reality He also shows how these myths have proliferated over the past four centuries and exert so much influence today infiltrating science textbooks and popular culture The seven myths Keas shows amount to little more than religion bashing especially Christianity bashing Unbelievable reveals Why the Dark Ages never happened Why we didn t need Christopher Columbus to prove the earth was round Why Copernicus would be shocked to learn that he supposedly demoted humans from the center of the universe What everyone gets wrong about Galileo s clash with the Church and why it matters today Why the vastness of the universe does not deal a blow to religious belief in human significance How the popular account of Giordano Bruno as a martyr for science ignores the fact that he was executed for theological reasons not scientific ones How a new myth is being positioned to replace religion a futuristic myth that sounds

scientific but isn't In debunking these myths Keas shows that the real history is much more interesting than the common narrative of religion at war with science This accessible and entertaining book offers an invaluable resource to students scholars teachers homeschoolers and religious believers tired of being portrayed as anti intellectual and anti science

Judge,2019-10-09 The catastrophes of the twentieth century have decisively broken the grip of Aristotle's fixed universe on our minds Society is no longer the logical category of statecraft that is to determine our lives The glorious horrors of fascism discredited the survival of the fittest upstaged even by the compulsory class equality of the Soviets Instead we now appeal to culture and mutual communication as we hope to grow together in response to each other The universe itself at last is open ended Particle physics and the genetic code ensure diversity for us all Our individual gifts will reveal our identity and our mission in life We are indeed personally answerable for the choices we make The twenty first century's great leap forward is Jerusalem's long foreshadowed answer to Athens Not logic but experiment has been the mainspring that has unlocked it The transformed life of the apostle Paul in Christ first experienced the developmental prospect that has inspired the cultural reformation of our time
