High-Reliability Autonomous Management Systems for Spacecraft Jianjun Zhang,Jing Li,2023-08-22 This book examines the autonomous management of spacecraft which uses modern control technologies such as artificial intelligence to establish a remote intelligent body on the spacecraft so that the spacecraft can complete its flight tasks by itself Its goal is to accurately perceive its own state and external environment without relying on external information injection and control or rely on external control as little as possible make various appropriate decisions based on this information and user tasks and be able to autonomously control spacecraft to complete various tasks Divides the autonomous management level of spacecraft into two levels Basic autonomy to meet spacecraft health requirements namely autonomous health management and autonomy of the advanced stage Divides the implementation of spacecraft autonomous management into three aspects Autonomous health management of spacecraft the spacecraft can monitor and sense its own state and can autonomously detect isolate and recover from faults Autonomous mission management the spacecraft can directly receive the mission formulate a reasonable plan according to the current state and working environment of the spacecraft and convert the mission into a specific sequence of instructions Spacecraft autonomous data management the spacecraft processes a large amount of raw data and extracts useful information and autonomously executes or changes flight tasks The autonomous management model of the spacecraft is divided into two points Compatibility the existing traditional control systems belong to the execution layer logic and are compatible with the existing systems Scalability it adopts a layered structure and each layer has different autonomous capabilities **U.S. Government Research Reports** ,1964 **Aerospace Medicine and Biology** ,1983 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA *Remote Sensing Image Fusion* Christine Pohl,John van Genderen,2016-10-03 *Remote Sensing Image Fusion A Practical Guide* gives an introduction to remote sensing image fusion providing an overview on the sensors and applications It describes data selection application requirements and the choice of a suitable image fusion technique It comprises a diverse selection of successful image fusion cases that are relevant to other users and other areas of

interest around the world The book helps newcomers to obtain a quick start into the practical value and benefits of multi sensor image fusion Experts will find this book useful to obtain an overview on the state of the art and understand current constraints that need to be solved in future research efforts For industry professionals the book can be a great introduction and basis to understand multisensor remote sensing image exploitation and the development of commercialized image fusion software from a practical perspective The book concludes with a chapter on current trends and future developments in remote sensing image fusion Along with the book RSIF website provides additional up to date information in the field
